Slides for Students Gary D. Fisk,2018-10-16 300 million powerpoint presentations are given daily, yet there is a

disconnect between the amazing technology of powerpoint and a mediocre student learning experience. To unleash the full potential of powerpoint presentations, we must do a better job of creating presentations that fit the educational needs of students. Slides for Students does just that. Slides for Students is an open and honest discussion about powerpoint in the classroom. A need exists for thoughtfully designed and implemented classroom instruction that focuses on the learner rather than on the technology. This book was written to translate academic research findings into practical suggestions about powerpoint that educators can use. Divided into two parts, Slides for Students discusses the history of powerpoint, explores academic studies on the topic, and demonstrates how to design slides to best suit educational needs and engage with students to avoid the dreaded death by powerpoint.

D-Day Invasion iMinds,2014-05-14 The story behind D-Day begins in 1939 when Nazi Germany, led by Adolf Hitler, attacked Poland and ignited World War Two. The following year, the Germans occupied France and Western Europe and launched a vicious air war against Britain. In 1941, they invaded the Soviet Union. Seemingly unstoppable, the Nazis now held virtually all of Europe. They imposed a ruthless system of control and unleashed the horror of the Holocaust. However, by 1943, the tide had begun to turn in favor of the Allies, the forces opposed to Germany. In the east, despite huge losses, the Soviets began to force the Germans back.

When The Scientist Presents: An Audio And Video Guide To Science Talks (With Dvd-rom) Jean-luc Lebrun,2009-08-21 Check out the author's website at www.scientific-presentations.com This book looks at the presenting scientist from a novel

angle: the presenter-host. When scientists give a talk, the audience (“guests”) expects the title of the talk to determine presentation content, they require understandable slides, and they demand visible and audible scientific authority. To each expectation corresponds a set of skills: personal (voice, host qualities, time control), technical (presentation tools and slide design), and scientific (Q&A, slide content). The author takes an original human factor view of the presentation delivery, in which the audience is easily distracted, rapidly forgetful, and increasingly impatient. Thus, insightful pointers are given on how to deliver the talk, how to craft the slides, and how to prevent the computer from rendering the presenting host-scientist into a “ghost”. In addition, the book goes in-depth over the treatment of questions by examining the motives and style of the questioners, and advising on how best to answer to each type of questioner. The book comes with a DVD for audio and video examples, and includes essential PowerPoint and Keynote techniques that a presenter cannot live without. Contents: Content Selection: Paper and Oral Presentation: The Difference Content Filtering Criteria Audience Expectations: General Audience Expectations Scientific Audience Expectations The Slides: Five Slide Types, Five Roles Slide Design The Presenter: The Master of Tools Scientist and Perfect Host The Grabbing Voice The Answerable Scientist Readership: Students, graduates, postgraduates, and professionals seeking help in improving their scientific presentation skills.
