Learning to be Capitalists Annette Miae Kim, 2008-10-02 Why have some countries been able to escape the usual dead end of international development efforts and build explosively growing capitalist economies? Based on years of fieldwork, this book provides a detailed account of the first generation of entrepreneurs in Vietnam in comparison to those in other transition countries. Focusing on the emergence of private land development firms in Ho Chi Minh City, the author shows how within seven years the private sector produced the majority of all new houses in the real estate market. This book demonstrates that capitalist entrepreneurialism was not the result of state initiative, properly incentivized policies, or individual personality traits. Rather, a society-wide reconstruction of cognitive paradigms enabled entrepreneurs to emerge and transformed Vietnam from a poor, centrally planned economy to one of the fastest growing, market economies in the world.

Financing Metropolitan Governments in Developing Countries Roy W. Bahl, Johannes F. Linn, Deborah L. Wetzel, 2013 The economic activity that drives growth in developing countries is heavily concentrated in cities. Catchphrases such as “metropolitan areas are the engines that pull the national economy” turn out to be fairly accurate. But the same advantages

of metropolitan areas that draw investment also draw migrants who need jobs and housing, lead to demands for better infrastructure and social services, and result in increased congestion, environmental harm, and social problems. The challenges for metropolitan public finance are to capture a share of the economic growth to adequately finance new and growing expenditures and to organize governance so that services can be delivered in a cost-effective way, giving the local population a voice in fiscal decision making. At the same time, care must be taken to avoid overregulation and overtaxation, which will hamper the now quite mobile economic engine of private investment and entrepreneurial initiative. Metropolitan planning has become a reality in most large urban areas, even though the planning agencies are often ineffective in moving things forward and in linking their plans with the fiscal and financial realities of metropolitan government. A growing number of success stories in metropolitan finance and management, together with accumulated experience and proper efforts and support, could be extended to a broader array of forward-looking programs to address the growing public service needs of metropolitan-area populations. Nevertheless, sweeping metropolitan-area fiscal reforms have been few and far between; the urban policy reform agenda is still a long one; and there is a reasonable prospect that closing the gaps between what we know how to do and what is actually being done will continue to be difficult and slow. This book identifies the most important issues in metropolitan governance and finance in developing countries, describes the practice, explores the gap between practice and what theory suggests should be done, and lays out the reform paths that might be considered. Part of the solution will rest in rethinking expenditure assignments and instruments of finance. The “right” approach also will depend on the flexibility of political leaders to relinquish some control in order to find a better solution to the metropolitan finance problem.
