Teaching Climate Change for Grades 6-12 Kelley T. Lê, 2021-06-20 Looking to tackle climate change and climate science in your classroom? This timely and insightful book supports and enables secondary science teachers to develop effective curricula ready to meet the Next Generation Science Standards (NGSS) by grounding their instruction on the climate crisis. Nearly one-third of the secondary science standards relate to climate science, but teachers need design and implementation support to create empowering learning experiences centered around the climate crisis. Experienced science educator, instructional coach, and educational leader Dr. Kelley T. Le offers this support, providing an overview of the teaching shifts needed for NGSS and to support climate literacy for students via urgent topics in climate science and environmental justice - from the COVID-19 pandemic to global warming, rising sea temperatures, deforestation, and mass extinction. You'll also learn how to engage the complexity of climate change by exploring social, racial, and environmental injustices stemming from the climate crisis that directly impact students. By anchoring instruction around the climate crisis, Dr. Le offers guidance on how to empower students to be the agents of change needed in their own communities. A range of additional teacher resources are also available at www.empoweredscienceteachers.com.

Science and the politics of openness Brigitte Nerlich, Sarah Hartley, Sujatha Raman, Alexander Smith, 2018-02-07 This

electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. The phrase 'here be monsters' or 'here be dragons' is commonly believed to have been used on ancient maps to indicate unexplored territories which might hide unknown beasts. This book maps and explores places between science and politics that have been left unexplored, sometimes hiding in plain sight - in an era when increased emphasis was put on 'openness'. The book is rooted in a programme of research funded by the Leverhulme Trust entitled: 'Making Science Public: Challenges and opportunities, which runs from 2014 to 2017. One focus of our research was to critically question the assumption that making science more open and public could solve various issues around scientific credibility, trust, and legitimacy. Chapters in this book explore the risks and benefits of this perspective with relation to transparency, responsibility, experts and faith.

Human Ecology of Climate Change Hazards in Vietnam An Thinh Nguyen, Luc Hens, 2018-08-13 This book analyzes climate change associated effects in the mountainous and coastal environments of Vietnam. The scope of the book allows international comparisons to be made between these two affected areas and other similarly affected locations under constant environmental pressure. Frequent and intense climate change hazards are described, along with a wider context of integrated interpretations, socioeconomic implications and policy responses. The book reports on original research combining methodologies from the natural sciences with approaches in human sciences, providing an interdisciplinary human ecological context to analyze similar situations worldwide. The book is structured in four parts. The first part offers background information, and details the human ecological framework. The geography of the analyzed regions is discussed to reflect the environmental and socioeconomic context of Vietnam's coasts and mountains. The second part addresses the coast of Central Vietnam. The effects of tropical storms, floods, rising sea levels and coastal erosion in Ky Anh are studied to highlight the impacts on the local population and its development perspectives. The third part focuses on the uplands of Northern Vietnam. The effects of cyclones, heavy rains, floods, flash floods, and landslides in the Van Chan Mountains are studied to compare the biophysical and socioeconomic impacts. Part four makes policy recommendations in building resilient landscapes and green cities, and discusses the potential implications of findings for practice in Vietnam. The book addresses a wide array of researchers, geography and economics students, consultants and decision makers interested in the actual status and the likely developments on the physical, socioeconomic and mitigation and adaptation attitudes and policies of climate change associated effects.

The Technocratic Antarctic Jessica O'Reilly, 2017-01-17 The Technocratic Antarctic is an ethnographic account of the scientists and policymakers who work on Antarctica. In a place with no indigenous people, Antarctic scientists and policymakers use expertise as their primary model of governance. Scientific research and policymaking are practices that inform each other, and the Antarctic environment—with its striking beauty, dramatic human and animal lives, and specter of global climate change—not only informs science and policy but also lends Antarctic environmentalism a particularly technocratic patina. Jessica O'Reilly conducted most of her research for this book in New Zealand, home of the Antarctic Gateway city of Christchurch, and on an expedition to Windless Bight, Antarctica, with the New Zealand Antarctic Program. O'Reilly also follows the journeys Antarctic scientists and policymakers take to temporarily Antarctic places such as science conferences, policy workshops, and the international Antarctic Treaty meetings in Scotland, Australia, and India. Competing claims of nationalism, scientific disciplines, field experiences, and personal relationships among Antarctic environmental

managers disrupt the idea of a utopian epistemic community. O'Reilly focuses on what emerges in Antarctica among the complicated and hybrid forms of science, sociality, politics, and national membership found there. The Technocratic Antarctic unfolds the historical, political, and moral contexts that shape experiences of and decisions about the Antarctic environment.

Developing and implementing a National Plan of Action for Small-Scale Fisheries (NPOA-SSF) Food and Agriculture Organization of the United Nations, 2024-03-04 A training programme around the National Plan of Action for Small-Scale Fisheries (NPOASSF) has been developed to support these processes at national level. This guide for trainers was developed to be used along with the rest of trainings materials on how to to develop and implement an NPOA-SSF. NPOA-SSF processes are unique in their kind because they ensure that the voices and concerns of small-scale fisheries are heard and allow them to actively participate in decision-making processes that shape their lives and livelihoods. In doing so, implementing an NPOA-SSF is an effective way to align legal frameworks with the provisions of the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries in the Context of Food Security and Poverty Eradication (SSF Guidelines). These Guidelines unite social development with responsible fisheries, hence addressing the marginalization and vulnerability present in the sector, promoting a human rights-based approach.

Climate and Health Education: Defining the Needs of Society in a Changing Climate Cecilia Sorensen, Gaurab Basu, Lisa H. Patel, Arianne Teherani, 2023-11-16 The adverse effects of climate change are now apparent and present urgent and complex challenges to human health and health systems globally. There is an imperative for quick action on many fronts: to recognize and respond to climate-health threats; prevent climate change at its source by reducing greenhouse gas emissions; support “greener” systems throughout the economy, including healthcare; understand the health co-benefits of adaptation and mitigation; and communicate effectively about these issues. Climate change is intertwined with historical and structural inequities and effective solutions must actively improve health equity. To meaningfully address these deep and interconnected issues, there is a growing imperative across the educational landscape to move beyond existing constraints toward new ways of thinking and learning. Many have recognized that we must create societal systems that account for the health of all people now and into the future while simultaneously preserving and improving the environment on which our life depends. Such transformations rest on the skills, knowledge, values, and attitudes of the workforce, not just in health and health care, but within all sectors. However, despite the health crisis of climate change at our doorstep, development of climate and health curricula is nascent, although is a growing consideration of leaders globally. Because the health impacts from climate and planetary change are so myriad and intertwined, sectors must work together like never before to move beyond existing silos of practice to a shared landscape and vision – in practice, but first in education.

Earth Surface Processes Philip A. Allen,2009-05-27 Earth Surface Processes is an introductory text for those studying the dynamics of fluid and sediment transport in the environments, in the context of both present-day patterns as well as the environmental changes decipherable in the geological record. The book is divided into two parts. The first deals with the global-scale aspects of the earth's surface system. The second part focuses on the physical underpinnings for fluid and sediment transport in a number of settings, found at the earth's surface and in its oceans. Earth Surface Processes fits into the literature of the broad holistic discipline of 'Earth System Science.' The author illustrates the physical principles of earth's surface processes and explains the relevant theories by quantitative practical exercises. The pioneering textbook on the new sedimentology One of the first textbooks to adopt the Earth Systems approach to geology, developed at Penn State and Stanford Should reinvigorate more traditional courses in physical sedimentology and dynamical sedimentology Successfully marries the innovative holistic approach to Earth Systems with the traditional reductionist approach to sedimentary processes Explains both the global-scale Earth Surface System and the fluid dynamics and sedimentary transport processes that underlie this Quantitative approach is reinforced with worked examples and solutions Richly illustrated with original diagrams and a colour plate section
