Construction Site Planning and Logistical Operations Randy R. Rapp, Bradley L. Benhart, 2015 Organizing and administering a construction site so that the right resources get to the right place in a timely fashion demands strong leadership and a rigorous process. Good logistical operations are essential to profitability, and this book is the essential, muddy boots guide to efficient site management. Written by experienced educator-practitioners from the world-leading Building Construction Management program at Purdue University, this volume is the ultimate guide to the knowledge, skills, and abilities that need to be mastered by project superintendents. Observations about leadership imperatives and techniques are included. Organizationally, the book follows site-related activities from bidding to project closeout. Beyond outlining broad project managerial practices, the authors drill into operational issues such as temporary soils and drainage structures, common equipment, and logistics. The content is primarily geared for the manager of a domestic or small commercial building construction project, but includes some reference to public and international work, where techniques, practices, and decision making can be substantially different. The book is structured into five sections and fifteen chapters. This facilitates ready adaptation either to industry training seminars or to university courses: Section I. The Project and Site Pre-Planning: The Construction Project and Site Environment (Randy R. Rapp); Due Diligence (Robert Cox); Site Organization and Layout (James O'Connor). Section II. The Site and Field Engineering Issues: Building Layout (Douglas Keith); Soil and Drainage Issues (Yi Jiang and Randy R. Rapp). Section III. Site Logistics: Site Logistical Procedures and Administration (Daphene Koch); Earthmoving (Douglas Keith); Material Handling Equipment (Bryan Hubbard). Section IV. Leadership and Control: Leadership and Communication (Bradley L. Benhart); Health, Safety, Environment (HSE), and Security (Jeffrey Lew); Project Scheduling (James Jenkins); Project Site Controls (Joseph Orczyk); Inspection and QA/QC (James Jenkins). Section V. Planning for Completion: Site-Related Contract Claims (Joseph Orczyk); Project Closeout (Randy R. Rapp).

Engineering Gerald W. Mayes PE Retired, 2023-08-25 The book follows the life of the author from his early recollections of growing up on the farm through his college training and his career as a civil engineer. It explores what forces and influences led him to desire to become an engineer, specifically a civil engineer. It shows his successes and his deficiencies and how he overcame them. His experiences directly affected the way he treated others and how he turned failures into

successes. It also introduces the novice reader to the world of engineering and adds insight to the world of the experienced engineer. Even experienced engineers and highly technical trained people can always learn more from others. The book follows his career through the initial graduation of the engineer, his first summer job as a practicing engineer, and each successive career change and modification. It develops the author as he learns to deal with supervision and being in charge as well as lessons he learns as his career progresses. As his career continues to develop, he learns that he does not utilize his technical skills as much since he has other competent people working for him to perform those tasks. As a supervisor of a large group, he has to develop people skills in order to handle the problems of his group. The book finally covers the many different tasks and assignments that are required that he must handle. The author performs many tasks that are not specifically a part of his job description, but he has learned to cope with unsuspecting requests and learns to adapt. A large part of his duties involves training and teaching those who work for him to accept new challenges and pass the knowledge learned on to others. The book will give insight into the working career of an engineer and provide instruction and knowledge to the young inexperienced engineer as well as to the experienced engineer.
