Event Information Systems Markus Heuchert, 2021-04-15 Events are an essential element of society. Advancing digital technologies and the ongoing globalization has put forward a variety of different business, leisure, or scientific events that need to be managed in order to take place. As a result of the proliferation of digital technology, IT systems are an indispensable part of this management process. Amid this pandemic crisis, these systems have become increasingly important due to the relocation of events into the virtual sphere. Since every event entails different requirements, event management systems need to be very flexible. In contrast to other application systems, this flexibility is needed during use as the requirements of future events are not known during the initial selection and roll-out of the software. This calls for an intensified dialogue between the business and IT to match technical possibilities with practical requirements. Currently, adequate means to support this dialogue are lacking. To this end, this dissertation presents a reference model that encompasses the essential processes and data structures in the domain. In 36 application cases, the reference model is instantiated and evaluated. Practitioners and researchers are the intended audiences of this work. Researchers may use it as a foundation to design novel IT artifacts in the domain. Practitioners benefit from the first comprehensive tool to support the design and use of digital technology in event management.

*Benefits Management* John Ward,Elizabeth Daniel,2006-01-06 This book considers the topic of achieving value from IT from both theoretical and practical perspectives. It is based on extensive research which produced a comprehensive understanding and analysis of the issues involved and innovative new approaches that addressed those issues plus considerable practical application, in a wide range of organisations of the ideas, processes, tools and techniques that were developed. The book describes how IS/IT investments can be aligned accurately with organisational strategy and how the approach and 'tool-kit' can be used by business managers and IS/IT specialists to identify the benefits available from different types of investments in a variety of organisational contexts. It describes how business cases can be developed that enable the benefits to be planned for and then realised through techniques and processes that overcome the organisational barriers that often prevent successful implementation. It also considers the strengths and limitations of existing methods, and shows how the approach can be integrated with best practice in the areas of project and change programme management. The book concludes by explaining how the key concepts in the approach have been extended and adapted to improve strategy development and decision making as well as an organisation's ability to implement its strategy successfully.
