Preparing for Life in a Digital World Julian Fraillon, John Ainley, Wolfram Schulz, Tim Friedman, Daniel Duckworth, 2020-02-13 This Open Access book summarizes the key findings from the second cycle of IEA's International Computer and Information Literacy Study (ICILS), conducted in 2018. ICILS seeks to establish how well schools around the globe are responding to the need to provide young people with the necessary digital participatory competencies. Effective use of information and communication technologies (ICT) is an imperative for successful participation in an increasingly digital world. ICILS 2018 explores international differences in students' computer and information literacy (CIL), namely their ability to use computers to investigate, create, and communicate at home, at school, in the workplace, and in the

community. Participating countries also had an option to administer an assessment of students' computational thinking (CT), focused on their ability to recognize aspects of real-world problems appropriate for computational formulation, and to evaluate and develop algorithmic solutions to those problems, so that the solutions could be operationalized with a computer. The data collected by ICILS 2018 show how digital competencies can be assessed using instruments representing authentic contexts for ICT use, and how students' CIL and CT skills relate to school learning experiences, out-of-school contexts, and student characteristics. Those data also show how learning technologies are used in classrooms around the world. Background questionnaires asked students about their use of ICT, and collected information from teachers, schools, and national education systems about the resourcing and teaching of CIL (and CT) within their countries. The results of ICILS 2018 will enable policymakers and education systems to develop a better understanding of the contexts and outcomes of CIL (and CT) education programs.

Design for Learning Jenae Cohn, Michael Greer, 2023-07-25 Online learning can be so dull—or not! Enter Jenae Cohn and Michael Greer, experienced authors and teachers, who decided it was time to take on the challenge of making online learning more interesting and compelling for students. So, they met in a Zoom call, contacted Rosenfeld Media, and wrote this book, *Design for Learning: User Experience in Online Teaching and Learning* (many Zoom calls later). The book is structured to teach online learning in such a way that anyone can follow its practices and create a dynamic educational presentation. Chapters cover everything from learning about your learners and setting learning goals to building connections with learners and giving them feedback. In addition, the authors dive into the nitty-gritty details of creating online courses, including takeaways at the end of each chapter and easy-to-follow examples throughout. “I particularly appreciate how thoughtful Jenae and Michael are about considering the experience from the learner’s point of view and the emphasis they put on learner agency.” —Julie Dirksen, Author, *Design for How People Learn Together*, Jenae Cohn and Michael Greer have years of experience designing and producing online courses for students. They wanted the tone of their book to be friendly, supportive, engaging, empathetic, and thoughtful. With that in mind, they chose examples that reflected what an ordinary user might encounter on a day-to-day basis, highlighting everything from complex skills (accessibility) to the most minute details, such as “smile when you talk” for a friendlier tone. Takeaways Writing compelling content and instructional text Designing interesting text and visuals Planning and producing videos Recording sound and voice-overs Creating and facilitating live website presentations Designing surveys for class feedback Rating whether your presentation was successful Who This Book Is For Teachers, learning development professionals, and anyone tasked with designing an online course or a one-off workshop Content creators, instructional designers, user experience designers, and others who care about the experience of online learning Whether you’re a novice or experienced online instructional designer, this book will show you how to apply industry best practices, and provide how-to examples, powerful templates, and activities to craft compelling

instructional content—whether text, audio, or video. Best of all—your course will never be called dull again. Frequently Asked Questions Q: How do I design a course that really keeps people’s attention online? A: When it comes to online learning, distraction is a huge concern, and engagement metrics are a big part of how designers can tell if a course is really engaging. We believe that the more targeted a course is to your specific learners and their needs, the better you’ll be able to serve them. (See Chapter 2, “Learning About Your Learners,” to understand where your learners might be coming from.) We also have specific strategies for keeping learners’ attention once the course is running (see Chapters 8, “Facilitating Live Webinar Presentations,” and 9, “Building Connections Among Learners”). Q: Is it really possible to create an online course or training that’s just as good as an on-site one? A: We think so! But it’s important for readers to recognize that an online learning experience is really different than an on-site course. Comparing the two experiences is (forgive the cliché) like comparing apples and oranges. You have to have different expectations up front—and so do your learners. In Chapter 4, “Building a Space for Online Learning,” we explore what unique advantages and limitations there are around building a course in an online space and consider how the lessons from UX research can inform quality experiences online. Q: I’ve been asked to design a course in just a month. Will this book help me design something quickly? A: A lot of designers have tight turnarounds, so you’ll find advice that could be applied on a shorter timeline. Specifically, you can modify some of the design approaches in Chapters 2, “Learning About Your Learners,” and 3, “Setting the Foundation.” In the chapters about video planning and production (Chapters 6, “Planning Videos,” and 7, “Producing Videos”), you’ll learn tips to make simpler videos in case you don’t have time for an extensive video planning and editing process.

TEACHING AND LEARNING WITH EMERGING TECHNOLOGY: A Future Perspective Dr. P. Muthukumar, Dr. A.R.S. Kannan, Dr. K. Malini, This edited book focuses on the possible education responses that can be implemented in future education times. The impact of technology on learning and teaching is often at the forefront of demands, particularly from those who dictate the funding available to pay for technology within education systems. This is not an unreasonable request and there is merit in impact evaluations of educational technologies including emerging technologies. Besides, it also shows how emerging technologies, including Artificial Intelligence, Blockchain, Educational Games and Virtual Reality/Augmented Reality, will reshape the future of education to provide efficient learning/teaching experiences and assessments. Furthermore, the book discusses innovative teaching and learning approaches (e.g., the use of open educational practices and peer-to-peer learning) that can be applied in this rapidly moving technological era to maintain education, including in unconditional times. Particularly, new instructional methods, such as game-based learning, should be designed based on integrated technologies to provide an effective learning experience, resulting in better learning outcomes. Future education should not solely focus on technology and psychology, but also on the applied instructional methods, as well as the human touch to maintain authentic and effective learning experiences. The book also discusses how teaching and learning can be

designed to meet the growing tendency of Open and Distance Education, where thousands of learners can be taken the same course from different cultures, backgrounds and learning needs. This book aims to establish itself, through the published books/textbooks and research, as a medium to provide guidelines and recommendations for different stakeholders, including policymakers, educational designers, teachers, and students on how to enhance both learning and teaching experiences in the future for better learning outcomes, as well as how to maintain education in emergency times. It also provides one step ahead towards future education to prepare different stakeholders for the rapid evolution of education, even in times of emergency and difficult situations.
