**Malaria Microscopy Quality Assurance Manual - Version 2** World Health Organization,2016-04-05 The first version of the WHO Malaria microscopy quality assurance manual (2009) was based on recommendations made at a series of informal consultations organized by WHO particularly a bi-regional meeting of the WHO regional offices for South-East Asia and the Western Pacific in April 2005 in Kuala Lumpur Malaysia followed by informal consultations held in March 2006 and February 2008 in Geneva Switzerland. Subsequently extensive consultations among international malaria experts led to consensus and preparation of the manual. This second version of the Manual is based on the recommendations of experts made at a WHO technical consultation in March 2014 in Geneva Switzerland. The aim of the meeting was to review the experiences of national malaria control programmes (NMCPs) national reference laboratories (NRLs) and technical agencies in using the Manual and country experience in order to improve systems for managing the quality of malaria microscopy. This second version takes into account the many years of experience of several agencies in the various aspects of quality assurance (QA) described in the Manual. In particular the sections on assessment of competence in malaria microscopy are based on use of this method by the WHO regional offices for South-East Asia and the Western Pacific in collaboration with the WHO Coordinating Centre for Malaria in Australia and by the WHO Regional Office for Africa in collaboration with Amref Health Africa. The section on setting up and managing an international reference malaria slide bank is based on the work of the WHO Regional Office for the Western Pacific in collaboration with the WHO Coordinating Centre for Malaria Diagnosis in the Philippines. The section on proficiency testing for malaria microscopy is based on work in the WHO Regional Office for

Africa in collaboration with the National Institute for Communicable Diseases in South Africa and experience in regional initiatives by Amref Health Africa. The section on slide validation is based on work by Médecins sans Frontières and the section on outreach training and supportive supervision (OTSS) is based on work by the President's Malaria Initiative Malaria Care Project Medical Care Development International and Amref Health Africa. The Manual is designed primarily to assist managers of NMCPs and general laboratory services responsible for malaria control. The information is also applicable to nongovernmental organizations (NGOs) and funding agencies involved in improving quality management systems for malaria microscopy. The Manual is not designed for QA of microscopy in research situations such as in clinical trials of new drugs and vaccines or for monitoring parasite drug resistance. It forms part of a series of WHO documents designed to assist countries in improving the quality of malaria diagnosis in clinical settings including the revised training manuals on Basic malaria microscopy (2010) and the Bench aids for malaria microscopy (2010).

**The Quality Toolbox** Nancy Tague, 2004-07-14 The Quality Toolbox is a comprehensive reference to a variety of methods and techniques: those most commonly used for quality improvement, many less commonly used, and some created by the author and not available elsewhere. The reader will find the widely used seven basic quality control tools (for example, fishbone diagram, and Pareto chart) as well as the newer management and planning tools. Tools are included for generating and organizing ideas, evaluating ideas, analyzing processes, determining root causes, planning, and basic data-handling and statistics. The book is written and organized to be as simple as possible to use so that anyone can find and learn new tools without a teacher. Above all, this is an instruction book. The reader can learn new tools or, for familiar tools, discover new variations or applications. It also is a reference book, organized so that a half-remembered tool can be found and reviewed easily, and the right tool to solve a particular problem or achieve a specific goal can be quickly identified. With this book close at hand, a quality improvement team becomes capable of more efficient and effective work with less assistance from a trained quality consultant. Quality and training professionals also will find it a handy reference and quick way to expand their repertoire of tools, techniques, applications, and tricks. For this second edition, Tague added 34 tools and 18 variations. The Quality Improvement Stories chapter has been expanded to include detailed case studies from three Baldrige Award winners. An entirely new chapter, Mega-Tools: Quality Management Systems, puts the tools into two contexts: the historical evolution of quality improvement and the quality management systems within which the tools are used. This edition liberally uses icons with each tool description to reinforce for the reader what kind of tool it is and where it is used within the improvement process.

In an attempt to develop a system that will pass the registration audit, we are tempted to establish processes with the primary purpose of conforming to the requirements of ISO 9001. This book is intended to help managers, quality professionals, internal audit coordinators, and internal auditors implement a practical internal audit process that meets the requirements of ISO 9001:2015 while adding significant, measurable value to the organization. The tools, techniques, and step-by-step guidelines provided in this book can also be used by those organizations that have a well-established internal audit process but are looking for easy ways to make that process more effective.
