Control Your ERP Destiny Steven Scott Phillips,2022-11-22 The history of implementing ERP systems has shown that leaving the fate of your Enterprise Resource Planning project in the hands of software consultants and vendors may only create a false sense of security. While the help of consultants is usually required, they are not all-knowing, have a limited ability to control the keys to project success, and are often the beneficiaries of cost overruns. When it comes to software vendors, their sales people will be long gone when it comes time to go-live with the new system. This book presents comprehensive strategies and techniques that enable organizations to take charge of their Enterprise Resource Planning

projects to drive success. It is a guide to making informed decisions during each project phase. The author describes how to become less dependent on outside consultants, mitigate project risks, and significantly reduce implementation costs. Just as important are strategies and methods for the project team and stakeholders to identify business improvement opportunities within your organization and redesign processes to achieve the project benefits. The book also contains many tips to create internal project ownership, select ERP software, manage service providers, transfer software knowledge, develop the right implementation strategies, establish a realistic schedule and budget, and properly test the new system. It also addresses the various application and system infrastructure deployment options, emerging technology trends, and the implications from a software selection, implementation and on-going support standpoint. The information in this book is applicable to new implementations and system upgrades. Reviews You owe it to your company and yourself to read this book. If you do so, you will sharply increase your odds for success and spend a lot less money. Steve has done the ERP industry a big service. - Thomas F. Wallace, early ERP pioneer, author, and Distinguished Fellow at The Ohio State University Center for Operational Excellence. There really aren't many must-read ERP books in the 30 year (or so) history of ERP, but you can add this book to the must-read list. The book fits nicely into what I call the Center of Excellence movement - the push by ERP customers to gain more value out of their ERP investments and endure less headaches. The book is a combination of hard-won advice, cautionary tales, and a bit of a manifesto for not placing blind trust in third party consultancies. - Jon Reed, SAP/ERP Market Analyst. I love this book. - R. Ray Wang. CEO and Principal Analyst at Constellation Research, a founding partner of the Altimeter Group and thought leader on enterprise digital transformation. If the Project Management Institute (PMI) had a certification program in ERP Management, this would be the only textbook needed. - Andy Klee, President, Klee Associates, ERPtips.com (SAP), and JDEtips.com (Oracle Enterprise One).

Handbook of Water and Wastewater Systems Protection Robert M. Clark,Simon Hakim,Avi Ostfeld,2011-09-01 Following the events of 9/11, the Administrator of the US Environmental Protection Agency created the Water Protection Task Force (WPTF), which identified water and wastewater systems as a major area of vulnerability to deliberate attack. The

WPTF suggested that there are steps that can be taken to reduce these vulnerabilities and to make it as difficult as possible for potential saboteurs to succeed. The WPTF recommended that be scrutinized with renewed vigor to secure water and wastewater systems against these possible threats. It also recommended that water and wastewater systems have a response plan in place in the event an act of terrorism occurs. The WPTF identified water distribution networks as an area of special vulnerability and highlighted the need for rapid on-line detection methods that are accurate and have a wide detection range. As a result of these recommendations novel technologies from various fields of science and engineering are now addressing water security issues and water and wastewater utilities are looking for innovative solutions. Once such technologies are available, there will be a rapid implementation process that will present many business opportunities for the private sector. However, in addition to terrorist threats water and wastewater systems are inherently vulnerable to natural disasters such as earthquakes and floods. This volume will address the problems associated with both intended terrorist attacks and natural disasters affecting water or wastewater systems. The book is divided into parts based on the kinds of threats facing water and wastewater systems: (1) a direct attack on water and wastewater infrastructure storage reservoirs, and distribution and collection networks; (2) a cyber attack disabling the functionality of the water and wastewater systems or taking over control of key components which might result in system failures; and (3) a deliberate chemical or biological contaminant injection at one of the water distribution system's nodes. It will examine unique plans, technological and managerial innovations for protecting such systems, and includes descriptions of projects that were implemented to respond to natural disasters. Case studies are presented that discuss existing projects and evaluate their performance, with an emphasis on providing guidelines and techniques that can be implemented by water and wastewater planners and managers to deal with natural and manmade disasters should they occur.

The global village is a reality and enterprise resource planning (ERP) implementations face new issues and challenges. Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges provides authoritative research on the theoretical frameworks and pragmatic discussions on global implementations of information systems, particularly ERP systems. This book offers professionals, managers, and researchers, who want to improve their understanding of the issues and challenges that arise when information systems cross national boundaries, with an authoritative, essential research resource.

Integrated Business Information Systems Klaus-Dieter Gronwald,2017-05-30 Enterprise Resource Planning (ERP), Supply Chain Management (SCM), Customer Relationship Management (CRM), Business Intelligence (BI) and Big Data Analytics (BDA) are business related tasks and processes, which are supported by standardized software solutions. The book explains that this requires business oriented thinking and acting from IT specialists and data scientists. It is a good idea to let students experience this directly from the business perspective, for example as executives of a virtual company. The course simulates the stepwise integration of the linked business process chain ERP-SCM-CRM-BI-Big Data of four competing groups of companies. The course participants become board members with full P&L responsibility for business units of one of four beer brewery groups managing supply chains from production to retailer.
