Securing Mega-Events Chad Whelan,Adam Molnar,2018-11-11 Mega-events such as the Olympic Games, World Cup finals and international political summits are occasions of almost unparalleled economic, political and social significance for host nations and cities. The scale and scope of mega-event security has continued to grow enormously since 11 September 2001, consistently involving the largest policing and security operations for event hosts outside of wartime. This book is the first to focus exclusively on the organisational dynamics underpinning the design and delivery of mega-event security. Using the G20 Summit in Brisbane, Australia in November 2014 as a case study, in conjunction with comparisons with events such as the Toronto 2010 G20, the authors engage in a comprehensive assessment of the networks, strategies and tensions involved in mega-event security. By drawing on the insightful experiences of those responsible for securing the Brisbane 2014 G20, the authors look behind-the-scenes to capture the complexity of mega-event security. The authors argue that such an approach is essential to better appreciate how different conceptions of security, ways of thinking and acting, impact a range of security ideals and outcomes.

Human Resource Management for Events Lynn Van der Wagen,2009-02-04 Human Resource Management for Events is the first text to cover management of human resources in the event environment. Linking theory, research and application it covers the differing and various types of event in which human resource management is key, such as: * Business Events - a vast sector including events people who manage conferences, exhibitions, incentive trips and individual business travel. * Sporting Events - this sector includes sporting events ranging from the Olympic Games, Rugby World Cup, Soccer World Cup, Tour de France, Grand Prix to many smaller, local sporting events. * Arts and Entertainment - the logistics, risk and financial issues facing entertainment events are leading to the development of more sophisticated operational skills for this sector. Music festivals are increasingly popular. * Public Events - civic ceremonies, parades, celebrations, festivals and protests all fall within the scope of public events. Planning, approval and risk management are increasingly on the agenda for

all levels of government. The particular challenges provided by such events are varied. The size of the workforce explodes at the time of the event to include the event management team, many paid staff, hundreds of volunteers and multiple contractors, such as food vendors and cleaning teams. Everyone working on the site comes into the scope of the event workforce. Little time is available for training and motivation plays a key role in retention and customer service. Decision making occurs on the run and the event is over before anyone can think about performance appraisal. The environment is further characterised by a fast pace, high stress levels and many workers are fatigued by the bump in period before the event audience pours through the gates to add yet another level of pressure. These features of the human resources environment are quite different to those of the traditional workforce. Human Resource Management for Events is vital reading for both students and practitioners involved in this crucially important aspect of event management.

Security Games Colin Bennett,Kevin Haggerty,2012-01-01 Security Games: Surveillance and Control at Mega-Events addresses the impact of mega-events – such as the Olympic Games and the World Cup – on wider practices of security and surveillance. Mega-Events pose peculiar and extensive security challenges. The overwhelming imperative is that nothing should go wrong. There are, however, an almost infinite number of things that can go wrong; producing the perceived need for pre-emptive risk assessments, and an expanding range of security measures, including extensive forms and levels of surveillance. These measures are delivered by a security/industrial complex consisting of powerful transnational corporate, governmental and military actors, eager to showcase the latest technologies and prove that they can deliver spectacular levels of security. Mega-events have thus become occasions for experiments in monitoring people and places. And, as such, they have become important moments in the development and dispersal of surveillance, as the infrastructure established for mega-events are often marketed as security solutions for the more routine monitoring of people and place. Mega-events, then, now serve as focal points for the proliferation of security and surveillance. They are microcosms of larger trends and

processes, through which – as the contributors to this volume demonstrate – we can observe the complex ways that security and surveillance are now implicated in unique confluences of technology, institutional motivations, and public-private security arrangements. As the exceptional conditions of the mega-event become the norm, Security Games: Surveillance and Control at Mega-Events therefore provides the glimpse of a possible future that is more intensively and extensively monitored.

Routledge Handbook of Sports Event Management Milena M. Parent,Jean-Loup Chappelet,2017-07-14 From the Olympic Games to community-level competitions, sports events can be complex and pose a particular set of managerial challenges. Each chapter addresses a specific stakeholder, defines that stakeholder and its relationships with sports events, describes the managerial requirements for a successful event, assesses current research and directions for future research, and outlines the normative dimensions of stakeholder engagement (such as sustainability and legacy). No other book takes such a broad view of sports event management, surveying key theory, current research, best practice, and moral and ethical considerations in one volume. With contributions from leading sport and event scholars from around the world, the Routledge Handbook of Sports Event Management is essential reading for any advanced student, researcher or professional with an interest in sport management, sport development, sport policy or events.

Handbook on Agent-Oriented Design Processes Massimo Cossentino,Vincent Hilaire,Ambra Molesini,Valeria Seidita,2014-03-28 To deal with the flexible architectures and evolving functionalities of complex modern systems, the agent metaphor and agent-based computing are often the most appropriate software design approach. As a result, a broad range of special-purpose design processes has been developed in the last several years to tackle the challenges of these specific application domains. In this context, in early 2012 the IEEE-FIPA Design Process Documentation Template SC0097B was defined, which facilitates the representation of design processes and method fragments through the use of standardized templates, thus supporting the creation of easily sharable repositories and facilitating the composition of new design processes. Following this standardization approach, this book gathers the documentations of some of the best-known agent-oriented design processes. After an introductory section, describing the goal of the book and the existing IEEE FIPA standard for design process documentation, thirteen processes (including the widely known Open UP, the de facto standard in object-oriented software engineering) are documented by their original creators or other well-known scientists working in the field. As a result, this is the first work to adopt a standard, unified descriptive approach for documenting different processes, making it much easier to study the individual processes, to rigorously compare them, and to apply them in industrial projects. While there are a few books on the market describing the individual agent-oriented design processes, none of them presents all the processes, let alone in the same format. With this handbook, for the first time, researchers as well as professional software developers looking for an overview as well as for detailed and standardized descriptions of design processes will find a comprehensive presentation of the most important agent-oriented design processes, which will be an invaluable resource when developing solutions in various application areas.
