Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18 The field of Business Process Management (BPM) is marred by a seemingly endless sequence of (proposed) industry standards. Contrary to other fields (e.g., civil or electronic engineering), these standards are not the result of a widely supported consolidation of well-understood and well-established concepts and practices. In the BPM domain, it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field. Despite the initial fervor associated with such standardization activities, it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings. Moreover, the results of the standardization processes themselves are a concern. BPM standards tend to deal with complex concepts, yet they are never properly defined and all-too-often not informed by established research. The result is a plethora of languages and tools, with no consensus on concepts and their implementation. They also fail to provide clear direction in the way in which BPM standards should evolve. One can also observe a dichotomy between the "business" side of BPM and its "technical" side. While it is clear that the application of BPM will fail if not placed in a proper business context, it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust.

Constructing European Union Trade Policy Gabriel Siles-Brügge, 2014-02-18 With the stagnation of the Doha Round of multilateral talks, trade liberalisation is increasingly undertaken through free trade agreements. Gabriel Siles-Brügge examines the EU's decision following the 2006 'Global Europe' strategy to negotiate such agreements with emerging economies. Eschewing the purely materialist explanations prominent in the field, he develops a novel constructivist argument to highlight the role of language and ideas in shaping EU trade policy. Drawing on extensive interviews and documentary analysis, Siles-Brügge shows how EU trade policymakers have privileged the interests of exporters to the detriment of import-competing groups, creating an ideational imperative for market-opening. Even during the on-going economic crisis the overriding mantra has been that the EU's future well-being depends on its ability to compete in global markets. The increasingly neoliberal orientation of EU trade policy has also had important consequences for its economic diplomacy with

the developing economies of the African, Caribbean and Pacific group of states.

The Success of Open Source Steve WEBER, 2009-06-30 Much of the innovative programming that powers the Internet, creates operating systems, and produces software is the result of open source code, that is, code that is freely distributed--as opposed to being kept secret--by those who write it. Leaving source code open has generated some of the most sophisticated developments in computer technology, including, most notably, Linux and Apache, which pose a significant challenge to Microsoft in the marketplace. As Steven Weber discusses, open source's success in a highly competitive industry has subverted many assumptions about how businesses are run, and how intellectual products are created and protected. Traditionally, intellectual property law has allowed companies to control knowledge and has guarded the rights of the innovator, at the expense of industry-wide cooperation. In turn, engineers of new software code are richly rewarded; but, as Weber shows, in spite of the conventional wisdom that innovation is driven by the promise of individual and corporate wealth, ensuring the free distribution of code among computer programmers can empower a more effective process for building intellectual products. In the case of Open Source, independent programmers--sometimes hundreds or thousands of them--make unpaid contributions to software that develops organically, through trial and error. Weber argues that the success of open source is not a freakish exception to economic principles. The open source community is guided by standards, rules, decisionmaking procedures, and sanctioning mechanisms. Weber explains the political and economic dynamics of this mysterious but important market development. Table of Contents: Preface 1. Property and the Problem of Software 2. The Early History of Open Source 3. What Is Open Source and How Does It Work? 4. A Maturing Model of Production 5. Explaining Open Source: Microfoundations 6. Explaining Open Source: Macro-Organization 7. Business Models and the Law 8. The Code That Changed the World? Notes Index Reviews of this book: In the world of open-source software, true believers can be a fervent bunch. Linux, for example, may act as a credo as well as an operating system. But there is much substance beyond zealotry, says Steven Weber, the author of *The Success of Open Source*...An open-source operating system offers its source code up to be played with, extended, debugged, and otherwise tweaked in an orgy of user collaboration. The author traces the roots of that ethos and process in the early years of computers...He also analyzes the interface between open source and the worlds of business and law, as well as wider issues in the clash between hierarchical structures and networks, a subject with relevance beyond the software industry to the war on terrorism. --Nina C. Ayoub, *Chronicle of Higher Education* Reviews of this book: A valuable new account of the [open-source software] movement. --Edward Rothstein, *New York Times* We can blindly continue to develop, reward, protect, and organize around knowledge assets on the comfortable assumption that their traditional property rights remain inviolate. Or we can listen to Steven Weber and begin to make our peace with the uncomfortable fact that the very foundations of our familiar knowledge as property world have irrevocably shifted. --Alan Kantrow, Chief Knowledge Officer, Monitor Group Ever since the invention of agriculture, human beings have

had only three social-engineering tools for organizing any large-scale division of labor: markets (and the carrots of material benefits they offer), hierarchies (and the sticks of punishment they impose), and charisma (and the promises of rapture they offer). Now there is the possibility of a fourth mode of effective social organization--one that we perhaps see in embryo in the creation and maintenance of open-source software. My Berkeley colleague Steven Weber's book is a brilliant exploration of this fascinating topic. --J. Bradford DeLong, Department of Economics, University of California at Berkeley
Steven Weber has produced a significant, insightful book that is both smart and important. The most impressive achievement of this volume is that Weber has spent the time to learn and think about the technological, sociological, business, and legal perspectives related to open source. *The Success of Open Source* is timely and more thought provoking than almost anything I've come across in the past several years. It deserves careful reading by a wide audience. --Jonathan Aronson, Annenberg School for Communication, University of Southern California

International Arbitration and the Rule of Law ,2017-09-22 Volume 19 of the Congress Series contains the proceedings of ICCA's 2016 Mauritius Congress, the first ICCA Congress held in Africa. In this volume, renowned practitioners, scholars and jurists from the region and around the world explore the contribution of arbitration to the rule of law and economic development; the conformity of arbitration with international standards of due process and the rule of law; and the benefits and challenges of arbitration in Africa. Topical issues of interest for practitioners, academics and students of arbitration - in the region and internationally - include: • Due process issues in constituting the arbitral tribunal and challenging its members • Interim measures issued by arbitral tribunals and domestic courts • Burden, standard and types of proof in the corruption defence • What to do (and what to avoid doing) to prepare a persuasive case • Do post-award remedies ensure conformity of the arbitral process with the rule of law? • Do rules and guidelines properly regulate the conduct of arbitration? • The interface between domestic courts and arbitral tribunals • What are appropriate remedies for findings of illegality in investment arbitration? • The effect of foreign national court judgments relating to the arbitral award • What does the future hold for investment arbitration in Africa and beyond?

European Yearbook of International Economic Law 2013 Christoph Herrmann,Markus Krajewski,Jörg Philipp Terhechte,2013-04-02 Part one of Volume 4 (2013) of the European Yearbook of International Economic Law offers a special focus on recent developments in international competition policy and law. International competition law has only begun to emerge as a distinct subfield of international economic law in recent years, even though international agreements on competition co-operation date back to the 1970s. Competition law became a prominent subject of political and academic

debates in the late 1990s when competition and trade were discussed as one of the Singapore issues in the WTO. Today, international competition law is a complex and multi-layered system of rules and principles encompassing not only the external application of domestic competition law and traditional bilateral co-operation agreements, but also competition provisions in regional trade agreements and non-binding guidelines and standards. Furthermore, the relevance of competition law for developing countries and the relationship between competition law and public services are the subject of heated debates. The contributions to this volume reflect the growing diversity of the issues and elements of international competition law. Part two presents analytical reports on the developments of the regional integration processes in North America, Central Africa and Southeast Asia as well as on the treaty practice of the European Union. Part three covers the legal and political developments in major international organizations that deal with international economic law, namely the IMF, WCO, WTO, WIPO, ICSID and UNCTAD. Lastly, part four offers book reviews of recent works in the field of international economic law.

Rethinking the Role of African National Courts in Arbitration Emilia Onyema, 2018-06-07 With the increase in commercial transactions within the fifty-four independent African states and at the international level, it has become apparent that most of the legal framework for arbitration across the continent require reform. Accordingly, in recent years, as this first in-depth treatment of arbitration in Africa shows, jurisprudence from national courts of various African jurisdictions demonstrates that the courts are becoming more pro-arbitration and judges increasingly better understand that their role is to support or complement the arbitral process. This book documents the second SOAS Arbitration in Africa conference held in Lagos in June 2016. In thirteen lucid chapters, African practitioners and academics and European specialists in African legal and arbitral systems provide a remarkably thorough overview of the relation of courts and arbitration in the continent. Among the matters that arise for discussion are the: • disposition of courts in Africa towards arbitration, whether supportive or interventionist; • involvement of courts in the arbitral process before, during, and after an award has been rendered; • publication and access to arbitration-related decisions from African courts; • enforcement of annulled awards in African states under the New York Convention; • prospects for the establishment of a pan-African investment court; and • how foreign courts (particularly in the United States, France, and Switzerland) perceive African arbitration. Because of the wide range of developmental stages among Africa's numerous court and legal systems, Part I of the book explores generic issues relevant to courts and arbitration, followed by detailed descriptions, including court decisions, of the situation in eight specific jurisdictions - Egypt, South Africa, Sudan, Mauritius, Nigeria, Ghana, Rwanda, and Kenya. The authors of these latter chapters are legal practitioners and academics from each of these countries. Throughout this book, policy recommendations for improving access to court decisions and laws in African states are brought to the fore. In its expertise-based advocacy for a mutually harmonious and supportive co-existence for arbitration and litigation in the context of the

complexities and peculiarities of African states – and its confrontation of the predominantly negative perception that often leads to ‘arbitration flight’ from the continent – this book helps companies, investors, and their advisors to base their decisions on facts and not perceptions. It will be of great value to practising lawyers in arbitration as counsel or arbitrators, companies doing transnational business, global law firms, government officials, and academics in the field.
