**Off-Balance Sheet Activities** Joshua Ronen,Anthony Saunders,Ashwinpaul C. Sondhi,1990-11-30 The objective of Off-Balance Sheet Activities is to gain insights into, and propose meaningful solutions to, those issues raised by the current proliferation of off-balance sheet transactions. The book has its origins in a New York University conference that focused on this topic. Jointly undertaken by the Vincent C. Ross Institute of Accounting Research and New York University's Salomon

Center for the study of Financial Institutions at the Stern School of Business, the conference brought together academic researchers and practitioners in the field of accounting and finance to address the issues with the broad-mindedness requisite of a group whose approaches to solutions are as different from each other as their respectively theoretical and applied approaches to the disciplines of finance and accounting. The essays are divided into two sections. The first covers issues surrounding OBS activities and banking and begins with a brief introduction that places the essays into context. OBS activities and the underinvestment problem, whether loan sales are really OBS, and money demand and OBS liquidity are examined in detail. Section two, which also begins with a brief introduction, focuses on issues of securitized assets and financing. A report on recognition and measurement issues in accounting for securitized assets is followed by three separate discussion essays. Other subjects covered include contract theoretic analysis of OBS financing, the use of OBS financing to circumvent financial covenant restrictions, and debt contracting and financial contracting. The latter two contributions are also followed by discussion essays. This unique collection of papers will prove to be an interesting and valuable tool for accounting and finance professionals as well as for academics involved in these fields. It will also be an important addition to public, college, and university libraries.

*Credit Derivatives and Structured Credit Trading* Vinod Kothari, 2011-12-15 Credit derivatives as a financial tool has been growing exponentially from almost nothing more than seven years ago to approximately US\$5 trillion deals completed by end of 2005. This indicates the growing importance of credit derivatives in the financial sector and how widely it is being used these days by banks globally. It is also being increasingly used as a device of synthetic securitisation. This significant market trend underscores the need for a book of such a nature. Kothari, an undisputed expert in credit derivatives, explains the subject matter using easy-to-understand terms, presents it in a logical structure, demystifies the technical jargons and blends them into a cohesive whole. This revised book will also include the following: - New credit derivative definitions - New features of the synthetic CDO market - Case studies of leading transactions of synthetic securitisations - Basle II rules - The Consultative Paper 3 has significantly revised the rules, particularly on synthetic CDOs - Additional inputs on legal issues - New clarifications on accounting for credit derivatives/credit linked notes
