Design Engineer's Handbook Keith L. Richards,2012-10-02 Student design engineers often require a cookbook approach to solving certain problems in mechanical engineering. With this focus on providing simplified information that is easy to retrieve, retired mechanical design engineer Keith L. Richards has written Design Engineer's Handbook. This book conveys the author's insights from his decades of experience in fields ranging from machine tools to aerospace. Sharing the vast knowledge and experience that has served him well in his own career, this book is specifically aimed at the student design engineer who has left full- or part-time academic studies and requires a handy reference handbook to use in practice. Full of material often left out of many academic references, this book includes important in-depth coverage of key topics, such as: Effects of fatigue and fracture in catastrophic failures Lugs and shear pins Helical compression springs Thick-walled or compound cylinders Cam and follower design Beams and torsion Limits and fits and gear systems Use of Mohr's circle in both analytical and experimental stress analysis This guide has been written not to replace established primary reference books but to provide a secondary handbook that gives student designers additional guidance. Helping readers determine the most efficiently designed and cost-effective solutions to a variety of engineering problems, this book offers a wealth of tables, graphs, and detailed design examples that will benefit new mechanical engineers from all walks.

Markup & Profit Michael Stone,1999-01-01 In order to succeed in a construction business you have to be able to mark up the price of your jobs to cover overhead expenses and make a decent profit. The problem is how much to mark it up. You don't want to lose jobs because you charge too much, and you don't want to work for free because you've charged too little. If you know how much to mark up you can apply it to your job costs and arrive at the right sales price for your work. This book gives you the background and the calculations necessary to easily figure the markup that is right for your business. Includes a CD-ROM with forms and checklists for your use.

His audiences hear the truth unfold as he writes about the assassination of John F. Kennedy, the war on drugs, the Secret Government and UFOs. Bill is a lucid, rational and powerful speaker who intent is to inform and to empower his audience. Standing room only is normal. All Bill's predictions were on record well before the events occurred. Bill is not a psychic. His information comes from Top Secret documents that he read while with the Intelligence Briefing Team and from over 17 years of thorough research. Bill Cooper is the world's leading expert on UFOs. -- Billy Goodman, KVEG, Las Vegas. The onlt man in America who has all the pieces to the puzzle that has troubled so many for so long. -- Anthony Hilder, Radio Free America William Cooper may be one of America's greatest heros, and this story may be the biggest story in the history of the world. -- Mills Crenshaw, KTALK, Salt Lake City. Think Like a Programmer V Anton Spraul,2012-08-12 The real challenge of programming isn't learning a language's syntax—it's learning to creatively solve problems so you can build something great. In this one-of-a-kind text, author V. Anton Spraul breaks down the ways that programmers solve problems and teaches you what other introductory books often ignore: how to Think Like a Programmer. Each chapter tackles a single programming concept, like classes, pointers, and recursion, and open-ended exercises throughout challenge you to apply your knowledge. You'll also learn how to: -Split problems into discrete components to make them easier to solve -Make the most of code reuse with functions, classes, and libraries -Pick the perfect data structure for a particular job -Master more advanced programming tools like recursion and dynamic memory -Organize your thoughts and develop strategies to tackle particular types of problems Although the book's examples are written in C++, the creative problem-solving concepts they illustrate go beyond any particular language; in fact, they often reach outside the realm of computer science. As the most skillful programmers know, writing great code is a creative art—and the first step in creating your masterpiece is learning to Think Like a Programmer.

The 30-second Storyteller Thomas Richter, 2007 Imagine a job where you need to work only 10 days a year to make \$100,000. A job that allows you to be a respected artist, a savvy craftsman, and a hip partygoer who hangs out with celebrities, superstars, and top models. No need to wear a tie and suit. No corporate office hours, and no supervising department heads checking your time card. At your command explosions occur, cars crash, helicopters swoop, and you are expected to spend a million dollars in a week or two. This job exists. It's called a commercial director, the creative mind behind the production of a TV spot. While being a commercial director may be one of the coolest jobs in the world, it's also one of the toughest jobs to get (and keep). *The 30-Second Storyteller: The Art and Business of Directing Commercials* teaches any filmmaker how to get work as a commercial director, how to navigate the pitfalls of production, and how to get clients to keep coming back to you for more. The book is not a textbook on directing -- plenty of other books cover that. Rather, *The 30-Second Storyteller* focuses on directorial challenges specifically related to creating a TV spot -- the techniques involved, the technologies of choice, and the obstacles that come between you and a successful career. It begins by teaching you how to get your foot in the door -- creating a spec reel, picking a specialty, getting signed with a production company, and successfully bidding for projects. It then covers the production of a commercial from preproduction through the shoot, all the way to finishing in post-production. Examples from a real-world commercial are utilized throughout to illustrate concepts. The book concludes with advice on obtaining work abroad, and making the jump from commercials to features, as TV ads are a training ground for Hollywood's next blockbuster director. Filmmakers like Ridley Scott, Michael Bay, David Fincher, Jonathan Glazer, Tarsem and Zack Snyder have all gotten their start in commercials.
