Color and Design Marilyn DeLong,Barbara Martinson,2013-08-29 From products we use to clothes we wear, and spaces we inhabit, we rely on colour to provide visual appeal, data codes and meaning. Color and Design addresses how we understand and experience colour, and through specific examples explores how colour is used in a spectrum of design-based disciplines including apparel design, graphic design, interior design, and product design. Through highly engaging contributions from a wide range of international scholars and practitioners, the book explores colour as an individual and cultural phenomenon, as a pragmatic device for communication, and as a valuable marketing tool. Color and Design provides a comprehensive overview for scholars and an accessible text for students on a range of courses within design, fashion, cultural studies, anthropology, sociology and visual and material culture. Its exploration of colour in marketing as well as design makes this book an invaluable resource for professional designers. It will also allow practitioners to understand how and why colour is so extensively varied and offers such enormous potential to communicate.

Ubiquitous Computing Fundamentals John Krumm,2018-10-08 ...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field. -From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that has been so essential to the field's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, Ubiquitous Computing Fundamentals brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to

summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous computing user interface Techniques that are revolutionizing the way we determine a person's location and understand other sensor measurements While we needn't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field's originators.

Saul Bass Jan-Christopher Horak,2014-11-18 Iconic graphic designer and Academy Award–winning filmmaker Saul Bass (1920–1996) defined an innovative era in cinema. His title sequences for films such as Otto Preminger's The Man with the Golden Arm (1955) and Anatomy of a Murder (1959), Alfred Hitchcock's Vertigo (1958) and North by Northwest (1959), and Billy Wilder's The Seven Year Itch (1955) introduced the idea that opening credits could tell a story, setting the mood for the movie to follow. Bass's stylistic influence can be seen in popular Hollywood franchises from the Pink Panther to James Bond, as well as in more contemporary works such as Steven Spielberg's Catch Me If You Can (2002) and television's Mad Men. The first book to examine the life and work of this fascinating figure, Saul Bass: Anatomy of Film Design explores the designer's revolutionary career and his lasting impact on the entertainment and advertising industries. Jan-Christopher Horak traces Bass from his humble beginnings as a self-taught artist to his professional peak, when auteur directors like Stanley Kubrick, Robert Aldrich, and Martin Scorsese sought him as a collaborator. He also discusses how Bass incorporated aesthetic concepts borrowed from modern art in his work, presenting them in a new way that made them easily recognizable to the public. This long-overdue book sheds light on the creative process of the undisputed master of film title design—a man whose multidimensional talents and unique ability to blend high art and commercial imperatives profoundly influenced generations of filmmakers, designers, and advertisers.

Design Literacy (continued) Steven Heller,1999 This volume also investigates larger movements and phenomena, such as Norman Rockwell's lasting impression on Americana, issues of plagiarism and censorship, and the Big Idea in advertising, and includes profiles of designers whose bodies of work helped determine the look and content of design today.--BOOK JACKET.

Software Takes Command Lev Manovich,2013-07-04 Offers the first look at the aesthetics of contemporary design from the theoretical perspectives of media theory and 'software studies'.

Art School Steven Henry Madoff,2009-09-11 Leading international artists and art educators consider the challenges of art education in today's dramatically changed art world. The last explosive change in art education came nearly a century ago, when the German Bauhaus was formed. Today, dramatic changes in the art world—its increasing professionalization, the pervasive power of the art market, and fundamental shifts in art-making itself in our post-Duchampian era—combined with a revolution in information technology, raise fundamental questions about the education of today's artists. Art School (Propositions for the 21st Century) brings together more than thirty leading international artists and art educators to reconsider the practices of art education in academic, practical, ethical, and philosophical terms. The essays in the book

range over continents, histories, traditions, experiments, and fantasies of education. Accompanying the essays are conversations with such prominent artist/educators as John Baldessari, Michael Craig-Martin, Hans Haacke, and Marina Abramovic, as well as questionnaire responses from a dozen important artists—among them Mike Kelley, Ann Hamilton, Guillermo Kuitca, and Shirin Neshat—about their own experiences as students. A fascinating analysis of the architecture of major historical art schools throughout the world looks at the relationship of the principles of their designs to the principles of the pedagogy practiced within their halls. And throughout the volume, attention is paid to new initiatives and proposals about what an art school can and should be in the twenty-first century—and what it shouldn't be. No other book on the subject covers more of the questions concerning art education today or offers more insight into the pressures, challenges, risks, and opportunities for artists and art educators in the years ahead. Contributors Marina Abramovic, Dennis Adams, John Baldessari, Ute Meta Bauer, Daniel Birnbaum, Saskia Bos, Tania Bruguera, Luis Camnitzer, Michael Craig-Martin, Thierry de Duve, Clémentine Deliss, Charles Esche, Liam Gillick, Boris Groys, Hans Haacke, Ann Lauterbach, Ken Lum, Steven Henry Madoff, Brendan D. Cycling and Cinema Bruce Bennett,2019-04-30 A unique exploration of the history of the bicycle in cinema, from Hollywood blockbusters and slapstick comedies to documentaries, realist dramas, and experimental films. Cycling and Cinema explores the history of the bicycle in cinema from the late nineteenth century through to the present day. In this new book from Goldsmiths Press, Bruce Bennett examines a wide variety of films from around the world, ranging from Hollywood blockbusters and slapstick comedies to documentaries, realist dramas, and experimental films, to consider the complex, shifting cultural significance of the bicycle. The bicycle is an everyday technology, but in examining the ways in which bicycles are used in films, Bennett reveals the rich social and cultural importance of this apparently unremarkable machine. The cinematic bicycles discussed in this book have various functions. They are the source of absurd comedy in silent films, and the vehicles that allow their owners to work in sports films and social realist cinema. They are a means of independence and escape for children in melodramas and kids' films, and the tools that offer political agency and freedom to women, as depicted in films from around the world. In recounting the cinematic history of the bicycle, Bennett reminds us that this machine is not just a practical means of transport or a child's toy, but the vehicle for a wide range of meanings concerning individual identity, social class, nationhood and belonging, family, gender, and sexuality and pleasure. As this book shows, two hundred years on from its invention, the bicycle is a revolutionary technology that retains the power to transform the world.

Sunderland, Industrial Giant Marie Gardiner,2017-11-24 Sunderland was once one of Britain's industrial giants. Famous for its shipyards, mines and glass-making, it thrived at a time when its country needed it most. After the Second

World War the town saw incredible change, as the heavy industry that seemed so permanent, faded and died. How do you cope with the loss of centuries of working tradition? These are the stories of the people who worked through this evolution, watched their town change around them and become a city – the people who saw the end of one era and the beginning of a challenging new one.

   Processing, second edition Casey Reas,Ben Fry,2014-12-19 The new edition of an introduction to computer programming within the context of the visual arts, using the open-source programming language Processing; thoroughly updated throughout. The visual arts are rapidly changing as media moves into the web, mobile devices, and architecture. When designers and artists learn the basics of writing software, they develop a new form of literacy that enables them to create new media for the present, and to imagine future media that are beyond the capacities of current software tools. This book introduces this new literacy by teaching computer programming within the context of the visual arts. It offers a comprehensive reference and text for Processing (www.processing.org), an open-source programming language that can be used by students, artists, designers, architects, researchers, and anyone who wants to program images, animation, and interactivity. Written by Processing's cofounders, the book offers a definitive reference for students and professionals. Tutorial chapters make up the bulk of the book; advanced professional projects from such domains as animation, performance, and installation are discussed in interviews with their creators. This second edition has been thoroughly updated. It is the first book to offer in-depth coverage of Processing 2.0 and 3.0, and all examples have been updated for the new syntax. Every chapter has been revised, and new chapters introduce new ways to work with data and geometry. New "synthesis" chapters offer discussion and worked examples of such topics as sketching with code, modularity, and algorithms. New interviews have been added that cover a wider range of projects. "Extension" chapters are now offered online so they can be updated to keep pace with technological developments in such fields as computer vision and electronics. Interviews SUE.C, Larry Cuba, Mark Hansen, Lynn Hershman Leeson, Jürg Lehni, LettError, Golan Levin and Zachary Lieberman, Benjamin Maus, Manfred Mohr, Ash Nehru, Josh On, Bob Sabiston, Jennifer Steinkamp, Jared Tarbell, Steph Thirion, Robert Winter

   The Pedagogy of Images Marina Balina,Serguei A. Oushakine,2021-06-01 In the 1920s, with the end of the revolution, the Soviet government began investing resources and energy into creating a new type of book for the first generation of young Soviet readers. In a sense, these early books for children were the ABCs of Soviet modernity; creatively illustrated and intricately designed, they were manuals and primers that helped the young reader enter the field of politics through literature. Children's books provided the basic vocabulary and grammar for understanding new, post-revolutionary realities, but they also taught young readers how to perceive modern events and communist practices. Relying on a process of dual-media rendering, illustrated books presented propaganda as a simple, repeatable narrative or verse, while also casting it in

easily recognizable graphic images. A vehicle of ideology, object of affection, and product of labour all in one, the illustrated book for the young Soviet reader emerged as an important cultural phenomenon. Communist in its content, it was often avant-gardist in its form. Spotlighting three thematic threads – communist goals, pedagogy, and propaganda – The Pedagogy of Images traces the formation of a mass-modern readership through the creation of the communist-inflected visual and narrative conventions that these early readers were meant to appropriate.

Paper Dragons Walden Bello,2019-08-15 Emerging relatively unscathed from the banking crisis of 2008, China has been viewed as a model of both rampant success and fiscal stability. But beneath the surface lies a network of fissures that look likely to erupt into the next big financial crash. A bloated real-estate sector, roller-coaster stock market, and rapidly growing shadow-banking sector have all coalesced to create a perfect storm: one that is in danger of taking the rest of the world's economy with it. Walden Bello traces our recent history of financial crises – from the bursting of Japan's 'bubble economy' in 1990 to Wall Street in 2008 – taking in their political and human ramifications such as rising inequality and environmental degradation. He not only predicts that China might be the site of the next crash, but that under neoliberalism this will simply keep happening. The only way that we can stop this cycle, Bello argues, is through a fundamental change in the ways that we organise: a shift to cooperative enterprise, respectful of the environment, and which fractures the twin legacies of

imperialism and capitalism. Insightful, erudite and passionate, Paper Dragons is a must-read for anyone wishing to prevent the next financial meltdown.

No Medium Craig Dworkin,2013-02-15 Close readings of ostensibly "blank" works—from unprinted pages to silent music—that point to a new understanding of media. In No Medium, Craig Dworkin looks at works that are blank, erased, clear, or silent, writing critically and substantively about works for which there would seem to be not only nothing to see but nothing to say. Examined closely, these ostensibly contentless works of art, literature, and music point to a new understanding of media and the limits of the artistic object. Dworkin considers works predicated on blank sheets of paper, from a fictional collection of poems in Jean Cocteau's Orphée to the actual publication of a ream of typing paper as a book of poetry; he compares Robert Rauschenberg's Erased De Kooning Drawing to the artist Nick Thurston's erased copy of Maurice Blanchot's The Space of Literature (in which only Thurston's marginalia were visible); and he scrutinizes the sexual politics of photographic representation and the implications of obscured or obliterated subjects of photographs. Reexamining the famous case of John Cage's 4'33", Dworkin links Cage's composition to Rauschenberg's White Paintings, Ken Friedman's Zen for Record (and Nam June Paik's Zen for Film), and other works, offering also a "guide to further listening" that surveys more than 100 scores and recordings of "silent" music. Dworkin argues that we should understand media not as blank, base things but as social events, and that there is no medium, understood in isolation, but only and always a plurality of media: interpretive activities taking place in socially inscribed space.

Shaping the Digital Dissertation Virginia Kuhn,Anke Finger,2021-05-04 This volume is a timely intervention that not only helps demystify the idea of a digital dissertation for students and their advisors, but will be broadly applicable to the work of librarians, administrators, and anyone else concerned with the future of graduate study in the humanities and digital scholarly publishing. Roxanne Shirazi, The City University of New York Digital dissertations have been a part of academic research for years now, yet there are still many questions surrounding their processes. Are interactive dissertations significantly different from their paper-based counterparts? What are the effects of digital projects on doctoral education? How does one choose and defend a digital dissertation? This book explores the wider implications of digital scholarship across institutional, geographic, and disciplinary divides. The volume is arranged in two sections: the first, written by senior scholars, addresses conceptual concerns regarding the direction and assessment of digital dissertations in the broader context of doctoral education. The second section consists of case studies by PhD students whose research resulted in a

natively digital dissertation that they have successfully defended. These early-career researchers have been selected to represent a range of disciplines and institutions. Despite the profound effect of incorporated digital tools on dissertations, the literature concerning them is limited. This volume aims to provide a fresh, up-to-date view on the digital dissertation, considering the newest technological advances. It is especially relevant in the European context where digital dissertations, mostly in arts-based research, are more popular. Shaping the Digital Dissertation aims to provide insights, precedents and best practices to graduate students, doctoral advisors, institutional agents, and dissertation committees. As digital dissertations have a potential impact on the state of research as a whole, this edited collection will be a useful resource for the wider academic community and anyone interested in the future of doctoral studies.

Saul Bass Jennifer Bass,Pat Kirkham,2011-11-09 This is the first book to be published on one of the greatest American designers of the 20th Century, who was as famous for his work in film as for his corporate identity and graphic work. With more than 1,400 illustrations, many of them never published before and written by the leading design historian Pat Kirkham, this is the definitive study that design and film enthusiasts have been eagerly anticipating. Saul Bass (1920-1996) created some of the most compelling images of American post-war visual culture. Having extended the remit of graphic design to include film titles, he went on to transform the genre. His best known works include a series of unforgettable posters and title sequences for films such as Alfred Hitchcock's Vertigo and Otto Preminger's The Man With The Golden Arm and Anatomy of a Murder. He also created some of the most famous logos and corporate identity campaigns of the century, including those for major companies such as AT&T, Quaker Oats, United Airlines and Minolta. His wife and collaborator, Elaine, joined the Bass office in the late 1950s. Together they created an impressive series of award-winning short films, including the Oscar-winning Why Man Creates, as well as an equally impressive series of film titles, ranging from Stanley Kubrick's Spartacus in the early 1960s to Martin Scorsese's Cape Fear and Casino in the 1990s. Designed by Jennifer Bass, Saul Bass's daughter and written by distinguished design historian Pat Kirkham who knew Saul Bass personally, this book is full of images from the Bass archive, providing an in depth account of one of the leading graphic artists of the 20th century.
