Vectors Raymond L. Rodriguez, David T. Denhardt, 2014-05-20 *Vectors: A Survey of Molecular Cloning Vectors and Their Uses* focuses on the functions of molecular cloning vectors. The book first discusses bacterial plasmid pBR322. Topics include criteria for plasmid vector design, construction and structure, transcriptional signals, DNA replication, recombination, mobilization, and plasmid stability. The text also examines bacteriophage lambda cloning vectors; filamentous phages as cloning vectors; chimeric single-stranded DNA phage-plasmid cloning vectors; and phage-plasmid hybrid vectors. The selection discusses cosmids and plasmid positive selection vectors, including library and construction, cosmid rescue, and positive selection vectors using plasmid-encoded lethal function. The text also examines vectors for regulating expression of cloned DNA, including lambda promoters, secretion vectors, and protein fusion vectors. The book takes a look at vectors with adjustable copy numbers. Copy number and protein production; adjustable copy number vectors; future expression vectors; rate-limiting steps of protein production; and promoters and ribosome binding sites are explained. The text puts emphasis on vectors for the synthesis of specific RNAs in vitro and cloning vectors for gram-positive bacteria. The selection is a valuable source of data for readers interested in molecular cloning vectors.

Field and Service Robotics Kazuya Yoshida, Satoshi Tadokoro, 2013-12-30 FSR, the International Conference on Field and Service Robotics, is the leading single track conference of robotics for field and service applications. This book presents the results of FSR2012, the eighth conference of Field and Service Robotics, which was originally planned for 2011 with the venue of Matsushima in Tohoku region of Japan. However, on March 11, 2011, a magnitude M9.0 earthquake occurred off the Pacific coast of Tohoku, and a large-scale disaster was caused by the Tsunami which resulted, therefore the conference was postponed by one year to July, 2012. In fact, this earthquake raised issues concerning the contribution of field and service robotics technology to emergency scenarios. A number of precious lessons were learned from operation of robots in the resulting, very real and challenging, disaster environments. Up-to-date study on disaster response, relief and recovery was then featured in the conference. This book offers 43 papers on a broad range of topics including: Disaster Response,

Service/Entertainment Robots, Inspection/Maintenance Robots, Mobile Robot Navigation, Agricultural Robots, Robots for Excavation, Planetary Exploration, Large Area Mapping, SLAM for Outdoor Robots, and Elemental Technology for Mobile Robots.

Experimental Manipulation of Gene Expression Masayori Inouye, 2014-06-28 Experimental Manipulation of Gene Expression discusses a wide range of host systems in which to clone and express a gene of interest. The aims are for readers to quickly learn the versatility of the systems and obtain an overview of the technology involved in the manipulation of gene expression. Furthermore, it is hoped that the reader will learn enough from the various approaches to be able to develop systems and to arrange for a gene of particular interest to express in a particular system. The book opens with a chapter on the design and construction of a plasmid vector system used to achieve high-level expression of a particular phage regulatory protein normally found in minute amounts in a phage-infected bacterial cell. This is followed by separate chapters on topics such as high-level expression vectors that utilize efficient Escherichia coli lipoprotein promoter as well as various other portions of the lipoprotein gene Ipp; DNA cloning systems for streptomycetes; and the design and application of vectors for high-level, inducible synthesis of the product of a cloned gene in yeast.

Crustacean Reproductive Physiology and its Applications Haihui Ye, Chaoshu Zeng, Naoaki Tsutsui, Heinrich Dirksen, 2022-09-27 Demand for crustacean production is increasing significantly throughout the world, and crustacean production from capture fisheries has almost stagnated. Aquaculture is the only possibility to meet this ever-growing demand for crustaceans. Still, many commercially important crustaceans are being captured from the wild, while breeding and seed production technologies are not available for these species. The bottleneck in the successful breeding of crustacean species is mainly due to the non-availability of information about reproductive biology. Studies on crustacean reproduction will shed new light on understanding the mechanism of sex determination and differentiation; meanwhile, the application of innovative techniques will vitally contribute to the progress of the crustacean industry. The research findings on crustacean reproduction will directly benefit aquaculture for successful captive breeding and seed production. Here, we are gathering both original research and review papers with the scope of the research topic, including but not limited to: • Mechanism of sex determination, sexual differentiation, and gonadal development in crustaceans; • Other life functions (e.g. endocrine, nutrition, immunity, heredity) involved in reproduction in crustaceans; • Applications of modern endocrinological and molecular approaches contributed to crustacean reproduction.
