PROCEEDINGS OF THE 21ST CONFERENCE ON FORMAL METHODS IN COMPUTER-AIDED DESIGN - FMCAD 2021

Michael W. Whalen,Ruzica Piskac,2021-10-14 Our life is dominated by hardware: a USB stick, the processor in our laptops or the SIM card in our smart phone. But who or what makes sure that these systems work stably, safely and securely from the word go? The computer - with a little help from humans. The overall name for this is CAD (computer-aided design), and it's

become hard to imagine our modern industrial world without it. So how can we be sure that the hardware and computer systems we use are reliable? By using formal methods: these are techniques and tools to calculate whether a system description is in itself consistent or whether requirements have been developed and implemented correctly. Or to put it another way: they can be used to check the safety and security of hardware and software. Just how this works in real life was also of interest at the annual conference on Formal Methods in Computer-Aided Design (FMCAD). Under the direction of Ruzica Piskac and Michael Whalen, the 21st Conference in October 2021 addressed the results of the latest research in the field of formal methods. A volume of conference proceedings with over 30 articles covering a wide range of formal methods has now been published for this online conference: starting from the verification of hardware, parallel and distributed systems as well as neuronal networks, right through to machine learning and decision-making procedures. This volume provides a fascinating insight into revolutionary methods, technologies, theoretical results and tools for formal logic in computer systems and system developments.

Uganda's Human Resource Challenge Jörg Wiegratz,2009 Despite significant economic recovery and improved macro-economic indicators since 1986, Uganda's economy continues to face considerable challenges. This book analyses the relationship between economic and human resource development in the country. It identifies deficits in capabilities, skills, know-how, experience, linkage building, and technology use as well as undesirable business practices. These shortcomings limit economic diversification, productivity enhancement, job and income creation, as well as poverty reduction. The book calls for more efforts towards human resource development. The current narrow mainstream economic policy focus on

macro-economic stability, a favourable investment climate, and improved physical infrastructure alone will not foster economic development and broad-based well-being. The Ugandan people and the private sector need more state support - in addition to the predominant education and health focus of the government and donors - if they are to develop the required human resources. More and better training, enhanced learning at the place of work and an improved business culture are vital. It is essential to focus on technical, organisational, managerial, entrepreneurial, learning, innovative, social, and institutional capabilities. Efforts towards dealing with these challenges will require attention to the political-economic climate of the country. To make the argument, the author covers a wide range of topics such as training and learning, technology, productivity, latecomer development, competitiveness, labour market, MSMEs, entrepreneurship, value chains, cooperation and trust, and human resource management. The book contains more than 130 figures, tables and information boxes. - See more at: <http://www.africanbookscollective.com/books/ugandas-human-resource-challenge#sthash.4XThRHxq.dpuf>
