Instructional Design for Organizational Justice Lisa A. Giacumo, Steven W. Villachica, Donald A. Stepich, 2024-07-24

Instructional Design for Organizational Justice prepares instructional designers to use culturally relevant, performance-based learning materials and environments that improve organizational and workplace learning experiences for today's diverse, globalized contexts. With socially just leadership and DEI initiatives growing in institutions across sectors, today's instructional design programs must prepare graduate students to be more culturally relevant, equity-minded, and inclusive in their professional practice. This textbook explores the implementation of systematic, systemic, and performance-oriented designs alongside the use of organizational justice theory to facilitate more equitable, inclusive performance improvement and workplace learning interventions. The book introduces the Learning and Performance Support Instructional Design (LeaPs ID) Model. Applicable to instructional designers, educational technologists, learning experience designers, learning engineers, and human resource development professionals, this original, iterative process: integrates common ID heuristics, design-based thinking, culture, equity, inclusion, and other inputs external to the organization and ID project; portrays a realistic, scalable, iterative, agile approach to the ID process; aids in the design of environments in which adult learners can observe, practice, and receive feedback, building the knowledge and capacity required for their desired performance; and is illustrated by a wealth of examples, templates, and processes developed in the field to support adult learners and collaborate with subject matter experts. Relevant to business, government, military, non-profit, non-governmental, and higher education settings, this unique and comprehensive volume lends itself to uncovering values and motives essential to successful agile project management as well as to diversity, equity, and inclusion initiatives and social change.

*Mindset Mathematics* Jo Boaler, Jen Munson, Cathy Williams, 2018-02-28 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the fifth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed *Mindset Mathematics* around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual mathematics tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in *Mindset Mathematics* reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, *Mindset Mathematics* is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
