   Transportation Management with SAP TM 9 Jayant Daithankar,Tejkumar Pandit,2014-08-07 The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors and improved revenue through accurate invoicing. However a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. Transportation Management with SAP TM 9 is a guide for CIO/CXOs evaluating options for various transportation management solutions available in the market and helps inappropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM Implementation and roll outs to ensure preparedness. The book explains end-to-end freight life cycle processes, functional system landscape, implementation challenges and post go-live precautions required to optimize investments in SAP TM. Transportation Management with SAP TM 9 also acts as a step by step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9 which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage-transformation.The current book available in the market on SAP TM is based on Version 6 release which does not cover air freight processes. Our book covers end-to-end air freight configuration scenarios for logistic companies.
   Love & Literacy Paul Bambrick-Santoyo,Stephen Chiger,2021-05-04 When our students enter middle and high school, the saying goes that they stop learning to read and start reading to learn. Then why is literacy still a struggle for so many of our students? The reality is that elementary school isn't designed to prepare students for Othello and Song of Solomon: so what do we do? Love and Literacy steps into the classrooms of extraordinary teachers who have guided students to the highest

levels of literacy. There is magic in their teaching, but that magic is replicable. It starts with a simple premise: kids fall in love with texts when they understand them, and that understanding comes from the right knowledge and/or the right strategy at the right time. Love and Literacy dissects the moves of successful teachers and schools and leaves you with the tools to make these your own: Research-based best practices in facilitating discourse, building curriculum, guiding student comprehension and analysis, creating a class culture where literacy thrives, and more Video clips of middle and high school teachers implementing these practices An online, print-ready Reading and Writing Handbook that places every tool at your fingertips to implement effectively Discussion questions for your own professional learning or book study group Great reading is more than just liking books: it's having the knowledge, skill, and desire to experience any text in all its fullness. Love and Literacy guides you to create environments where students can build the will and wherewithal to truly fall in love with literacy.

Managing Software Deliverables John Rittinghouse PhD CISM,2003-12-24 Managing Software Deliverables describes a set of proven processes for establishing an effective Software Program Management Office (SPMO) function in a corporate setting. Every business that has people performing Software Project Management (PM) activities has a need for these processes. In some instances, an organization may already have a PMO chartered with overall responsibility for each project managed in an enterprise. In those cases, this book will either provide validation of their efforts or it will provide some techniques and useful approaches that can be utilized to further improve on their overall implementation of the PMO. In the vast majority of cases in business, however, a PMO is unheard of. Each project managed in the enterprise is unfortunately managed separately from all others (at great cost in both time and money to the enterprise). - Phase Roadmaps clearly depict what is expected by all parties at each phase of effort - Pre-built Intranet is ready to deploy in a corporate setting and provides immediate use - Process Methodology adheres to proven best-practices for software development

Design Thinking for Training and Development Sharon Boller,Laura Fletcher,2020-06-09 Better Learning Solutions Through Better Learning Experiences When training and development initiatives treat learning as something that occurs as a one-time event, the learner and the business suffer. Using design thinking can help talent development professionals ensure learning sticks to drive improved performance. Design Thinking for Training and Development offers a primer on design thinking, a human-centered process and problem-solving methodology that focuses on involving users of a solution in its design. For effective design thinking, talent development professionals need to go beyond the UX, the user experience, and incorporate the LX, the learner experience. In this how-to guide for applying design thinking tools and techniques, Sharon Boller and Laura Fletcher share how they adapted the traditional design thinking process for training and development projects. Their process involves steps to: Get perspective. Refine the problem. Ideate and prototype. Iterate (develop, test, pilot, and refine). Implement. Design thinking is about balancing the three forces on training and development programs: learner wants and needs, business needs, and constraints. Learn how to get buy-in from skeptical stakeholders. Discover why taking requests for training, gathering the perspective of stakeholders and learners, and crafting problem statements will uncover the true issue at hand. Two in-depth case studies show how the authors made design thinking work. Job aids and tools featured in this book include: a strategy blueprint to uncover what a stakeholder is trying to solve an empathy map to capture the learner's thoughts, actions, motivators, and challenges an experience map to better understand how the learner performs. With its hands-on, use-it-today approach, this book will get you started on your own journey to applying design thinking.

Improving Schools Shaun Rawolle,Muriel Wells,Louise Paatsch,Russell Tytler,Coral Campbell,2015-10-22 This unique book explores school improvement policy – from its translation into national contexts and school networks to its implementation in leader and teacher practices in individual schools and classrooms within this network of schools and its impact on students' learning. It draws on multiple conceptual and theoretical resources to explore the complexities attached to a school improvement process in a network of schools in Australia. These conceptual and theoretical resources include discourse, practice, representation and network, concepts common to both policy research as well as studies of leadership and classroom practice. They lead to a more detailed understanding of the intersections between educational policy and intervention processes, and the complex reality of school processes and teaching practices. In the book we trace the implementation of school improvement policies through its multiple phases, levels and contexts. Our data-collection and analysis methods draw on a variety of perspectives in the way different players perceive their roles and the nature of the initiative and the ways in which these intersect. The research findings are used to seek productive approaches to school improvement that combine policy integrity with local flexibility. The book contributes to the school improvement literature through its exploration of tensions between global and systemic settings and local practices and histories.
