Applied Analog Electronics: A First Course In Electronics Kevin Karplus,2023-06-06 This textbook is for a first course on electronics. It assumes no prior electronics experience, but does assume that students have had calculus 1 (single-variable differential calculus) and high-school physics.A key idea of the course is that students need a lot of design experience and hands-on work, rather than a lot of theory. The course is centered around the labs, which are a mix of design labs and measurement/modeling labs.This unique volume takes students from knowing no electronics to being able to design and build amplifier and filter circuits for connecting sensors to microcontrollers within 20 weeks. Students design a digital thermometer, a blood-pressure meter, an optical pulse monitor, an EKG, an audio preamplifier, and a class-D power amplifier. They also learn how to measure and characterize components, including impedance spectroscopy of a loudspeaker and of electrochemical electrodes.Related Link(s)

Integrating Digital Literacy in the Disciplines Lauren Hays,Jenna Kammer,2023-07-03 Digital literacy has become the vital competency that students need to master before graduating. This book provides rich examples of how to integrate it in disciplinary courses.While many institutions are developing introductory courses to impart universal literacy (skills students need to know) and creative literacy (skills for creating new content), discipline-specific skills (skills needed to succeed within a specific discipline) are a vital extension to their learning and ability to apply digital literacy in different contexts. This book provides examples of how to integrate digital literacy across a wide variety of courses spanning many

domains.Rather than a wholly new core institutional outcome, digital literacy adds to the development of critical thinking, communication, problem-solving, and teamwork skills by building students' capacities to assess online information so they can ethically share, communicate, or repurpose it through the appropriate use of available digital technologies. In short, it provides the vital digital dimension to their learning and the literacy skills which will be in increasing demand in their future lives.Following introductory chapters providing context and a theoretical framework, the contributing authors from different disciplines share the digital competencies and skills needed within their fields, the strategies they use to teach them, and insights about the choices they made. What shines through the examples is that, regardless of the specificity of the disciplinary examples, they offer all readers a commonality of approach and a trove of ideas that can be adapted to other contexts.This book constitutes a practical introduction for faculty interested in including opportunities to apply digital literacy to discipline-specific content. The book will benefit faculty developers and instructional designers who work with disciplinary faculty to integrate digital literacy. The book underscores the importance of preparing students at the course level to create, and be assessed on, digital content as fields are modernizing and delivery formats of assignments are evolving.Domains covered include digital literacy in teacher education, writing, musicology, indigenous literary studies, communications, journalism, business information technology, strategic management, chemistry, biology, health sciences, optometry, school librarianship, and law.The book demonstrates a range of approaches that can used to teach digital literacy skills in the classroom, including:·Progressing from digital literacy to digital fluency ·Increasing digital literacy by creating digital content · Assessment of digital literacy ·Identifying ethical considerations with digital literacy ·Sharing digital content outside of the classroom ·Identifying misinformation in digital communications ·Digitizing instructional practices, like lab notes and essays ·Reframing digital literacy from assumption to opportunity ·Preparing students to teach digital literacy to others ·Collaborating with other departments on campus to support digital literacy instruction ·Incorporating media into digital literacy (digital media literacy) ·Using digital storytelling and infographics to teach content knowledge] ·Weaving digital literacy throughout the curriculum of a program, and with increasing depth

    Designing for User Engagement on the Web Cheryl Geisler,2013-08-15 Designing for User Engagement on the Web: 10 Basic Principles is concerned with making user experience engaging. The cascade of social web applications we are now familiar with — blogs, consumer reviews, wikis, and social networking — are all engaging experiences. But engagement is an increasingly common goal in business and productivity environments as well. This book provides a foundation for all those seeking to design engaging user experiences rich in communication and interaction. Combining a handbook on basic principles with case studies, it provides readers with a rich understanding of engagement: extending a welcome, setting the context, making a connection, sharing control, supporting interaction, creating a sense of place, and planning to continue the engagement. Based on research funded by the Society for Technical Communication, the case studies illustrate how designers build community in order to support education, connect kids to community resources, introduce users to other cultures, foster collaboration, encourage activism, and much more. Whatever your motive, if you aim to create engaging user experiences, you will want to explore Designing for User Engagement on the Web.

    Writing Program Architecture Bryna Siegel Finer,Jamie White-Farnham,2017-11-01 Writing Program Architecture offers an unprecedented abundance of information concerning the significant material, logistical, and rhetorical features of writing programs. Presenting the realities of thirty diverse and award-winning programs, contributors to the volume describe reporting lines, funding sources, jurisdictions, curricula, and other critical programmatic matters and provide insight into their program histories, politics, and philosophies. Each chapter opens with a program snapshot that includes summary demographic and historical information and then addresses the profile of the WPA, program conception, population served, funding, assessment, technology, curriculum, and more. The architecture of the book itself makes comparison across programs and contexts easy, not only among the programs described in each chapter but also between the program in any given chapter and the reader's own program. An online web companion to the book includes access to the primary documents that have been of major importance to the development or sustainability of the program, described in a "Primary Document" section of each chapter. The metaphor of architecture allows us to imagine the constituent parts of a writing program as its foundation, beams, posts, scaffolding—the institutional structures that, alongside its people, anchor a program to the ground and keep it standing. The most extensive resource on program structure available to the field, Writing Program Architecture illuminates structural choices made by leaders of exemplary programs around the United States and provides an

authoritative source of standard practice that a WPA might use to articulate programmatic choices to higher administration.    Folksonomies. Indexing and Retrieval in Web 2.0 Isabella Peters,2009-12-23 In Web 2.0 users not only make heavy use of Col-laborative Information Services in order to create, publish and share digital information resources - what is more, they index and represent these re-sources via own keywords, so-called tags. The sum of this user-generated metadata of a Collaborative Information Service is also called Folksonomy. In contrast to professionally created and highly struc-tured metadata, e.g. subject headings, thesauri, clas-sification systems or ontologies, which are applied in libraries, corporate information architectures or commercial databases and which were developed according to defined standards, tags can be freely chosen by users and attached to any information resource. As one type of metadata Folksonomies provide access to information resources and serve users as retrieval tool in order to retrieve own re-sources as well as to find data of other users. The book delivers insights into typical applications of Folksonomies, especially within Collaborative Information Services, and discusses the strengths and weaknesses of Folksonomies as tools of knowl-edge representation and information retrieval. More-over, it aims at providing conceptual considerations for solving problems of Folksonomies and presents how established methods of knowledge representa-tion and models of information retrieval can successfully be transferred to them.

   LEED Lab Patricia Andrasik,2021-11-22 Facility performance evaluations inform the long-term life of a building and do not end with design or construction. To this aim, Patricia Andrasik created LEED Lab, in collaboration with the US Green Building Council, an increasingly popular international interdisciplinary collegiate laboratory course, which utilizes campus buildings as demonstration sites to facilitate the green assessment of existing buildings. LEED Lab: A Model for Sustainable Design Education uses the LEED O+M building rating system to measure and achieve performance-driven campus facilities in which the readers work and operate. The book explains in simple terms the theory, tasks, tools and techniques necessary for credit implementation and achievement, and includes case studies and exercises for practical application in each chapter. Readers will learn the conceptual scientific framework used to understand existing operational performance and how to quantify sustainable synergies, create green campus policies with administrators, and understand systems such as energy

and water in a research-based application. The entire manual is accompanied by a vast online 'Teaching Toolkit' to provide helpful educational resources such as syllabi, lectures, examinations, assignments, Individual Student Progress Presentation (ISSP) templates, web resources, and much more. An excellent guide for undergraduate or graduate students enrolled in LEED Lab or a similar campus building assessment course, as well as construction or architectural professionals and facility managers, this manual navigates the complexities of using a green building diagnostic tool such as LEED O+M towards greater environmental literacy.

Error Reduction and Prevention in Surgical Pathology Raouf E. Nakhleh,2015-03-03 Tissue diagnosis in surgical pathology is the most important determinant of patient outcomes in oncology and other medical conditions. An appropriate diagnosis of a tumor correctly determines the necessary therapy for that patient. Error Reduction and Prevention in Surgical Pathology focuses on how errors happen, the best systems to detect errors and the best systems to prevent errors. As with any form of testing, the test cycle in surgical pathology can be divided into pre-analytic (collection and handling of specimens), analytic (the actual determination of disease or other diagnostic information) and post-analytic (generation of reports and distribution). Error can occur anywhere in the process and all of these steps must be performed optimally so that the correct diagnosis is made and delivered. Error Reduction and Prevention in Surgical Pathology serves as an essential guide to a successfully managed laboratory and contains all relevant information needed to manage patients and deliver the best diagnosis.

Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges Jonathan E. Suk,Kathleen M. Vogel,Amanda Jane Ozin,2015-06-04 In September 2011, scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research, but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus (hereafter referred to as the H5N1 virus) that was transmissible via aerosol between ferrets. These results suggested a worrisome possibility: the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response, a series of international discussions on the nature of dual-use life science arose. These discussions addressed the complex social, technical, political, security, and ethical issues related to dual-use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives.
