Eliminate Your Competition Sean O'Shaughnessey, 2018-05-14 Most salespeople lose the deal before they ever get started! It isn't uncommon for the customer to have already made a decision before most salespeople even learn of the opportunity. Most salespeople have to beat the preferred competitor by a significant margin just to be considered equivalent. Don't you wish that you could be the preferred vendor in all of your opportunities? Selling is a difficult career in which to make a living; it is not uncommon to have the commission check denied before the salesperson even gets a chance to win. Analysis of thousands of sales situations has made it phenomenally obvious that most salespeople begin their sales campaign so late in the decision-making process that they are virtually guaranteed to lose the order. To make matters worse, when they do start the campaign early enough, most salespeople do not know how to control the prospect adequately so that they can guarantee their victory. Typical turnover for a sales department is 10-20%. Many companies see turnover that approaches 40-60%! This turnover costs them 50% of their revenue-generating capability. In any organization that exceeds 25% turnover, the loss of trust with the customer can be astounding as the new salesperson tries to rebuild the entire relationship. In any given quarter dozens or hundreds of companies do not make their forecasted numbers and are dramatically punished by Wall Street. This book will provide the management of a company with a framework to teach their salespeople how to attain their quotas with higher profits. It will also allow salespeople to rise to the top of their organization and be the super-achievers who win awards, trips, bonuses, and respect. In this book, I will show you how to eliminate your competition and maximize your commission.

Anna and Her Daughters D.E. STEVENSON,2022-01-03 One day we had been well-off and secure; the old grey London house had been 'home' and we imagined that our lives . . . would continue to run smoothly forever. The next day it was all gone. For Anna Harcourt and her three daughters-lovely Helen, who always gets what she wants, young Jane, who makes the best of what she has, and Rosalie, the middle daughter who wavers somewhere in between-the world is turned upside down by their father's death and the discovery that they will have to sell their London home. The girls are shocked when Anna buys a cottage in Ryddelton, her home town in Scotland, but they soon settle in to Scottish life, each in her own way. As time passes, the three girls must contend with love and tragedy, hope and despair, laughter and tears, all unfolding with D.E. Stevenson's incomparable storytelling and knowledge of human nature. First published in 1958, *Anna and Her Daughters* is a compelling, poignant, and ultimately joyful tale of family, romance, and healing. This new edition includes an autobiographical sketch by the author. Miss Stevenson has her own individual and charming way of seeing things. Western Mail

Data Smart John W. Foreman,2013-10-31 Data Science gets thrown around in the press like it'smagic. Major retailers are predicting everything from when theircustomers are pregnant to when they want a new pair of ChuckTaylors. It's a brave new world where seemingly meaningless datacan be transformed into valuable insight to drive smart businessdecisions. But how does one exactly do data science? Do you have to hireone of these priests of the dark arts, the data scientist, toextract

this gold from your data? Nope. Data science is little more than using straight-forward steps to process raw data into actionable insight. And in DataSmart, author and data scientist John Foreman will show you how that's done within the familiar environment of a spreadsheet. Why a spreadsheet? It's comfortable! You get to look at the data every step of the way, building confidence as you learn the tricks of the trade. Plus, spreadsheets are a vendor-neutral place to learn data science without the hype. But don't let the Excel sheets fool you. This is a book for those serious about learning the analytic techniques, the math and the magic, behind big data. Each chapter will cover a different technique in a spreadsheet so you can follow along: Mathematical optimization, including non-linear programming and genetic algorithms Clustering via k-means, spherical k-means, and graph modularity Data mining in graphs, such as outlier detection Supervised AI through logistic regression, ensemble models, and bag-of-words models Forecasting, seasonal adjustments, and prediction interval through monte carlo simulation Moving from spreadsheets into the R programming language You get your hands dirty as you work alongside John through each technique. But never fear, the topics are readily applicable and the author laces humor throughout. You'll even learn what a dead squirrel has to do with optimization modeling, which you no doubt are dying to know.
