Sprint Jake Knapp,John Zeratsky,Braden Kowitz,2016-03-08 From inside Google Ventures, a unique five-day process for solving tough problems, proven at thousands of companies in mobile, e-commerce, healthcare, finance, and more.

Entrepreneurs and leaders face big questions every day: What's the most important place to focus your effort, and how do you start? What will your idea look like in real life? How many meetings and discussions does it take before you can be sure you have the right solution? Now there's a surefire way to answer these important questions: the Design Sprint, created at Google by Jake Knapp. This method is like fast-forwarding into the future, so you can see how customers react before you invest all the time and expense of creating your new product, service, or campaign. In a Design Sprint, you take a small team, clear your schedules for a week, and rapidly progress from problem, to prototype, to tested solution using the step-by-step five-day process in this book. A practical guide to answering critical business questions, Sprint is a book for teams of any size, from small startups to Fortune 100s, from teachers to nonprofits. It can replace the old office defaults with a smarter, more respectful, and more effective way of solving problems that brings out the best contributions of everyone on the team—and helps you spend your time on work that really matters.

A World Without Email Cal Newport,2021-03-02 New York Times bestseller! From New York Times bestselling author Cal Newport comes a bold vision for liberating workers from the tyranny of the inbox--and unleashing a new era of productivity. Modern knowledge workers communicate constantly. Their days are defined by a relentless barrage of incoming messages and back-and-forth digital conversations--a state of constant, anxious chatter in which nobody can disconnect, and so nobody has the cognitive bandwidth to perform substantive work. There was a time when tools like email felt cutting edge, but a thorough review of current evidence reveals that the hyperactive hive mind workflow they helped create has become a productivity disaster, reducing profitability and perhaps even slowing overall economic growth. Equally worrisome, it makes us miserable. Humans are simply not wired for constant digital communication. We have become so used to an inbox-driven workday that it's hard to imagine alternatives. But they do exist. Drawing on years of investigative reporting, author and computer science professor Cal Newport makes the case that our current approach to work is broken, then lays out a series of principles and concrete instructions for fixing it. In A World without Email, he argues for a workplace in which clear processes--not haphazard messaging--define how tasks are identified, assigned and reviewed. Each person works on fewer things (but does them better), and aggressive investment in support reduces the ever-increasing burden of administrative tasks. Above all else, important communication is streamlined, and inboxes and chat channels are no longer central to how work unfolds. The knowledge sector's evolution beyond the hyperactive hive mind is inevitable. The question is not whether a world without email is coming (it is), but whether you'll be ahead of this trend. If you're a CEO seeking a competitive edge, an entrepreneur convinced your productivity could be higher, or an employee exhausted by your inbox, A World Without Email will convince you that the time has come for bold changes, and will walk you through exactly how to make them happen.

Inside the Box Drew Boyd,Jacob Goldenberg,2013-06-11 "The 'inside-the-box approach' can reveal key opportunities for

innovation that are hiding in plain sight" (Daniel H. Pink, author of Drive). The traditional attitude toward creativity in the American business world is to "think outside the box"—to brainstorm without restraint in hopes of coming up with a breakthrough idea, often in moments of crisis. Sometimes it works, but it's a problem-specific solution that does nothing to engender creative thinking more generally. Inside the Box demonstrates Systematic Inventive Thinking (SIT), which systemizes creativity as part of the corporate culture. This counterintuitive and powerfully effective approach to creativity requires thinking inside the box, working in one's familiar world to create new ideas independent of specific problems. SIT's techniques and principles have instilled creative thinking into such companies as Procter & Gamble, Johnson & Johnson, and other industry leaders. Inside the Box shows how corporations have successfully used SIT in business settings as diverse as medicine, technology, new product development, and food packaging. Dozens of books discuss how to make creative thinking part of a corporate culture, but none takes the innovative and unconventional approach of Inside the Box. With "inside the box" thinking, companies of any size can become sufficiently creative to solve problems even before they develop and to innovate on an ongoing basis. It's a system that works! "Boyd and Goldenberg explain the basic building blocks for creativity and by doing so help all of us better express our potential" (Dan Ariely, author of Predictably Irrational).
