Transparent User Authentication Nathan Clarke,2011-08-17 This groundbreaking text examines the problem of user authentication from a completely new viewpoint. Rather than describing the requirements, technologies and implementation issues of designing point-of-entry authentication, the book introduces and investigates the technological requirements of implementing transparent user authentication - where authentication credentials are captured during a user's normal interaction with a system. This approach would transform user authentication from a binary point-of-entry decision to a continuous identity confidence measure. Topics and features: discusses the need for user authentication; reviews existing authentication approaches; introduces novel behavioural biometrics techniques; examines the wider system-specific issues with designing large-scale multimodal authentication systems; concludes with a look to the future of user authentication.

The Mathematics of Harmony Alexey Stakhov,2009 Assisted by Scott Olsen (Central Florida Community College, USA). This volume is a result of the author's four decades of research in the field of Fibonacci numbers and the Golden Section and their applications. It provides a broad introduction to the fascinating and beautiful subject of the OC Mathematics of Harmony, OCO a new interdisciplinary direction of modern science. This direction has its origins in OC The ElementsOCO of Euclid and has many unexpected applications in contemporary mathematics (a new approach to a history of mathematics, the generalized Fibonacci numbers and the generalized golden proportions, the OC goldenOCO algebraic equations, the generalized Binet formulas, Fibonacci and OC goldenOCO matrices), theoretical physics (new hyperbolic models of Nature) and computer science (algorithmic measurement theory, number systems with irrational radices, Fibonacci computers, ternary mirror-symmetrical arithmetic, a new theory of coding and cryptography based on the Fibonacci and OC goldenOCO matrices). The book is intended for a wide audience including mathematics teachers of high schools, students of colleges and universities and scientists in the field of mathematics, theoretical physics and computer science. Adrian Frutiger - Typefaces Heidrun Osterer,Philipp Stamm,2021-04-06 The Swiss type designer Adrian Frutiger decisively influenced the international creation of typefaces after 1950. His Univers typeface and the machine-readable font OCR-B are milestones, as is his type for the Paris airports, which evolved into the Frutiger typeface. All set new standards for

signage types. In all, he created some fifty types, including Ondine, Méridien, Avenir, and Vectora. Based on conversations with Frutiger himself and on extensive research, this publication provides a highly detailed and accurate account of the type designer's artistic development. All of his types - from the design phase to the marketing stage - are illustrated and analyzed with reference to the technology and related types. Hitherto unpublished types that were never realized and more than one hundred logos complete the picture.

Advances in Computers Marvin Zelkowitz, 2009-06-12 This is volume 73 of Advances in Computers. This series, which began publication in 1960, is the oldest continuously published anthology that chronicles the ever-changing information technology field. In these volumes we publish from 5 to 7 chapters, three times per year, that cover the latest changes to the design, development, use and implications of computer technology on society today. In this current volume, subtitled Emerging Technologies, we discuss several new advances in computer software generation as well as describe new applications of those computers. The first chapter gives an overview of various software development technologies that have been applied during the past 40 years with the goal of improving the software development process. This includes various methods such as structured development methods, reviews, object-oriented methods and rapid development technologies. Chapter 2 explores implications of UML as an emerging design notation for software. Chapter 3 looks at the emerging concept of pervasive computing and its impact on resource management and security. The authors discuss how the goal of transparency of computers affects efficiency of the system as well as security concerns. Chapter 4 discusses RFID, or radio frequency identification. This is the technology that cheaply tags products with unique identifiers that only need to pass near

a reading device rather than specifically being read by a scanner. With this technology, products can be traced through the supply chain from manufacture to use easily. In the final chapter, the authors discuss the use of robot technology in medicine, specifically computer-integrated interventional medicine (CIIM) in which robotic control takes over some or all of the aspects of surgery.

About Face Anne Burt, Christina Baker Kline, 2008-05-27 Distinctive and unique, facial appearance is hugely important in every encounter we will ever have. From the concept of beauty to the social ill of discrimination, the importance of the face in our interpersonal interactions is certainly known. But have you ever thought about the role your face plays in your day-to-day life, or the way your face may have determined the outcome of an incident from your past? In *About Face*, twenty-five writers tackle this question, each using the same simple framework of an opening paragraph that objectively considers what they see when they look in the mirror. Each writer then details an experience that transpired, in one way or another, because of the face they live with: a feature that belies a woman's heritage, a scar that serves as a daily reminder of a childhood tragedy, an unwanted change due to sun exposure or smoking or drinking. Since we live our entire lives behind our faces, *About Face* presents a challenge: to consider exploring our experiences from a vantage point we simply don't have access to. This collection uncovers surprising outcomes and truly unique observations about internal experiences as witnessed from the writers' external points of view.
