Document Analysis Systems VI Simone Marinai, Andreas Dengel, 2004-12-10

This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems (DAS 2004) held during September 8–10, 2004 at the University of Florence, Italy. Several papers represent the state of the art in a broad range of “traditional” topics such as layout analysis, applications to graphics recognition, and handwritten documents. Other contributions address the description of complete working systems, which is one of the strengths of this workshop. Some papers extend the application domains to other media, like the processing of Internet documents. The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents, a taste which frequently requires the analysis of color documents. A total of 17 papers are associated with these topics, whereas two years ago (in DAS 2002) only a couple of papers dealt with these problems. In our view there are three main reasons for this new wave in the DAS community. From the scientific point of view, several research fields reached a thorough knowledge of techniques and problems that can be effectively solved, and this expertise can now be applied to new domains. Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries.

**Pro MERN Stack** Vasan Subramanian, 2017-03-02 Assemble the complete stack required to build a modern web app using React: MongoDB (a NoSQL database) and Express (a framework for web application servers), which runs on Node (JavaScript on the server side), complement React very nicely. This book will also cover many other tools that go into building a complete web application: React Router, React-Bootstrap, Redux, Babel, and webpack. Though the primary focus of Pro MERN Stack is to equip you with all that is required to build a full-fledged web application, a large portion of the book will be devoted to React. The popular MEAN (MongoDB, Express, AngularJS, Node) stack introduced Single Page Apps (SPAs) and front-end Model-View-Controller (MVC) as new and efficient paradigms. But it has its shortcomings such as lack of support for SEO friendly server-side rendering and being too prescriptive by being a framework. Facebook's React is a technology that competes indirectly with AngularJS. It is not a full-fledged MVC framework. It is a JavaScript library for building user interfaces (in some sense the View part). Yet, it is possible to build a web app by replacing AngularJS with React - hence the

term MERN stack. What You Will Learn Discover the details of React, the React Way, and how to get the maximum out of this library See the basics of MongoDB, Express, and Node, enough to build a web app Work with other tools complementary to React, including React-Bootstrap and React Router Use the tools required to build JavaScript based SPAs Tie all the components together to build a complete web app. Who This Book Is For Developers and architects who have prior experience in any web app stack other than the MERN stack will find the book useful to learn about this modern stack. Prior knowledge of JavaScript, HTML, and CSS is required.

**Pro MERN Stack** Vasana Subramanian, 2019-05-11 Assemble the complete stack required to build a modern web app using MongoDB, Express, React, and Node. This book also covers many other complementary tools: React Router, GraphQL, React-Bootstrap, Babel, and Webpack. This new edition will use the latest version of React (React 16) and the latest React Router (React Router 4), which has a significantly different approach to routing compared to React Router 2 which was used in the first edition of the book. Though the primary focus of Pro MERN Stack is to equip you with all that is required to build a full-fledged web application, a large portion of the book will be devoted to React 16. *Government Contracting* William Sims Curry, 2016-08-05 The second edition of *Government Contracting: Promises and Perils* picks up where the first edition's mission left off: exposing fraud, incompetence, waste, and abuse (FIWA) and analyzing corruption, mismanagement, and ineptitude that defile government contracting. The first edition thoroughly outlined procurement throughout the contracting cycle including initial planning, contractor selection, contract administration, contract closeout, and auditing. This significantly revised new edition provides additional much-needed guidance on contracting documents, management tools, and processes for addressing negative influences on government contracting, including an improved approach to evaluating proposals. Specific guidance for avoiding FIWA is provided for government officials and employees, government agencies, and government contractors, and practical solutions to problems faced by individuals and organizations involved in government contracting are intended for both practitioner and pedagogical

applications. The Government Procurement Corruption Wall of Shame that was introduced in the first edition to illustrate contracting perils such as conflicts of interest, duplicity, favoritism, incompetence, kickbacks, and protests is continued in the second edition, and cases illustrating the existence of FIWA in government contracting have been thoroughly updated. Contracting documents and contract management tools are provided on a website designed to accompany the book. Written at the graduate level and specifically intended for state, local, federal, and international government procurement activities, this textbook is required reading for public procurement, contract management, business, and public administrations courses.
