The Craft of Scientific Presentations Michael Alley,2013-06-21 The Craft of Scientific Presentations, 2nd edition aims to strengthen you as a presenter of science and engineering. The book does so by identifying what makes excellent presenters such as Brian Cox, Jane Goodall, Richard Feynman, and Jill Bolte Taylor so strong. In addition, the book explains what causes so many scientific presentations to flounder. One of the most valuable contributions of this text is that it teaches the assertion-evidence approach to scientific presentations. Instead of building presentations, as most engineers and scientists do, on the weak foundation of topic phrases and bulleted lists, this assertion-evidence approach calls for building presentations on succinct message assertions supported by visual evidence. Unlike the commonly followed topic-subtopic approach that PowerPoint leads presenters to use, the assertion-evidence approach is solidly grounded in research. By showing the differences between strong and weak presentations, by identifying the errors that scientific presenters typically make, and by teaching a much more powerful approach for scientific presentations than what is commonly practiced, this book places you in a position to elevate your presentations to a high level. In essence, this book aims to have you not just succeed in your scientific presentations, but excel. About the Author Michael Alley has taught workshops on presentations to engineers and scientists on five continents, and has recently been invited to speak at the European Space Organization, Harvard Medical School, MIT, Sandia National Labs, Shanghai Jiao Tong University, Simula Research Laboratory, and United Technologies. An Associate Professor of engineering communication at Pennsylvania State University, Alley is a leading researcher on the effectiveness of different designs for presentation slides.

Design Thinking Research Christoph Meinel,Larry Leifer,2021-08-11 Extensive research conducted by the Hasso Plattner Design Thinking Research Program at Stanford University in Palo Alto, California, USA, and the Hasso Plattner Institute in Potsdam, Germany, has yielded valuable insights on why and how design thinking works. The participating researchers have identified metrics, developed models, and conducted studies, which are featured in this book, and in the previous volumes of this series. This volume provides readers with tools to bridge the gap between research and practice in design thinking with varied real world examples. Several different approaches to design thinking are presented in this volume. Acquired frameworks are leveraged to understand design thinking team dynamics. The contributing authors lead the reader through new approaches and application fields and show that design thinking can tap the potential of digital technologies in a human-centered way. In a final section, new ideas in neurodesign at Stanford University and at Hasso Plattner Institute in Potsdam are elaborated upon thereby challenging the reader to consider newly developed methodologies and provide discussion of how these insights can be applied to various sectors. Special emphasis is placed on understanding the mechanisms underlying design thinking at the individual and team levels. Design thinking can be learned. It has a methodology that can be observed across multiple settings and accordingly, the reader can adopt new frameworks to modify

and update existing practice. The research outcomes compiled in this book are intended to inform and provide inspiration for all those seeking to drive innovation – be they experienced design thinkers or newcomers.

Communicating In a Digital World Aristotle T. Lekacos,2010-03-19

Technologies in a Multilingual Environment Daria Bylieva,Alfred Nordmann,2023-02-18 The book addresses the challenge of living in a multilingual world from three perspectives: socio-linguistics and the study of multilingualism in contrast, philosophy of technology with its emphasis on the world as a technosphere—how it is made, how it is experienced, and how it can be managed, and then pedagogy and the question of teaching and learning to competently negotiate multilingual environments. In today's multicultural and multilingual world, technologies provide a common ground. The story of the technosphere as a multilingual environment offers new perspective, namely that of learning to cooperate and coordinate.

Healthy Presentations Emily P. Green,2021-07-13 This book is a practical guide for busy clinicians and educators within the biomedical sciences on how to improve their presentations. It includes specific, practical guidance on crafting a talk, tips on incorporating interactive elements to facilitate active learning, and before-and-after examples of improved slide design. Chapters discuss all aspects of exceptional presentations such as the identification of main concepts, organization of content, and best practices for creating lectures that are focused on the facilitation of learning rather than on passive information transfer. The examples provided are grounded in the biomedical sciences where presentations are necessarily dense and rich with critical content, making this book an essential read for anyone who lectures within a biomedical curriculum or presents at professional conferences. This book also addresses hot topics in medical education such as presenting on virtual platforms, and reviewing teaching materials for diversity, inclusion, and bias. These topics are not addressed in any other books on the market, and they address real gaps in medical and health professions training. Written from the perspective of an educator with over 20 years of experience in medical education, Healthy Presentations: How to Craft Exceptional Lectures in Medicine, the Health Professions, and the Biomedical Sciences recognizes the importance of high-quality, inclusive, and

learner-centered presentations, and it provides essential guidance and support to the faculty who create them.
